

Stage 1. Introduction

Upon entering an ID or case number for the interview, this welcome page is displayed within Network Canvas interviewer for all interviews.

Stage 2. Service Organizations

The list provided in the sample SNAAPS protocol is prepopulated with a roster from a city in Texas. Users can replace this roster with a tailored list from their local area. In this example, Mr. Johnson selected three service organizations he has or had gotten services from.

The screenshot shows the 'Network Canvas Interviewer' application. The main heading asks, 'Which of these organizations provide you with services or have provided you with services in the past?'. The interface is divided into two columns: 'Available to add' and 'Added'.

Available to add:

- Abilene Hope Haven**
PHONE: (325) 677-4673
WEBSITE: <https://abilenehopehaven.org/>
- Abilene Housing Authority**
PHONE: (325) 676-6385

- Betty Hardwick Center**
PHONE: (325) 690-5100; 24-Hour Crisis Hot Line: (800)758-3344

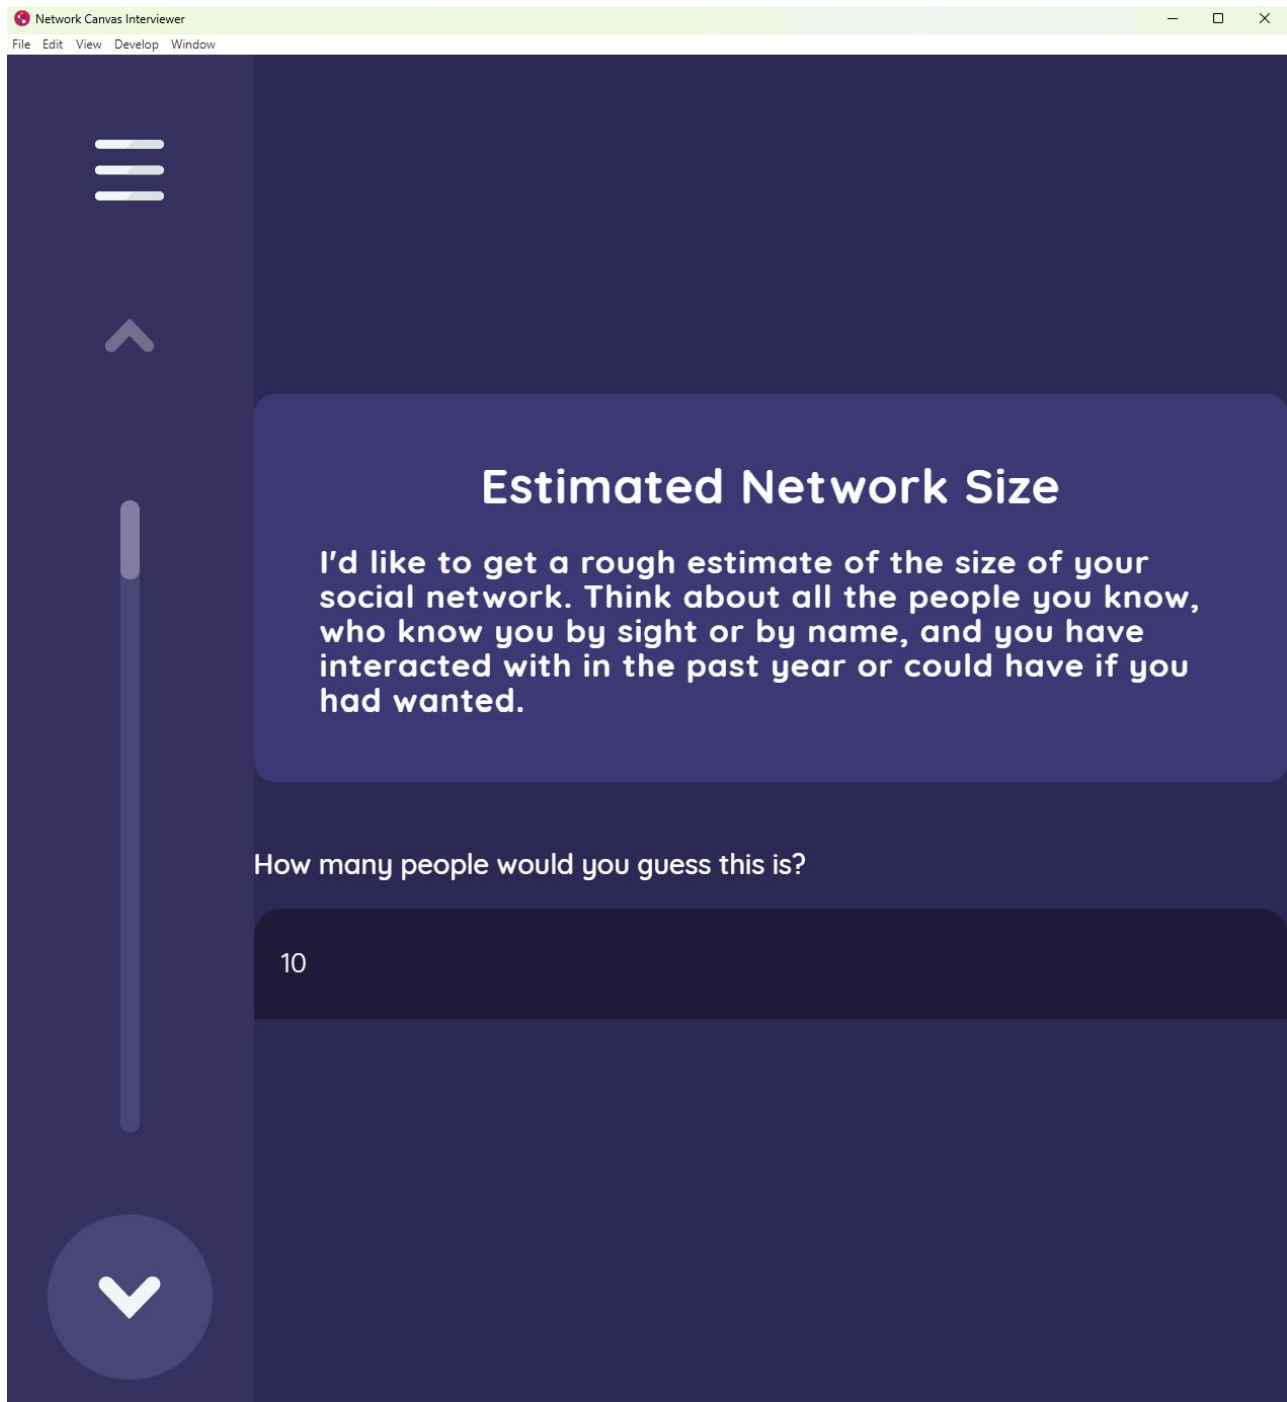

Added:

- Abilene ADA Paratr...
- Abilene VA Clinic
- Abilene Senior Center

A search bar at the bottom of the 'Available to add' column contains the placeholder text 'Enter a search term...'. A vertical scrollbar is visible on the right side of the 'Available to add' list.

Stage 3. Estimated Network Size

When the client provides an estimate of their network size, the practitioner gets an idea of the time it will take for a complete assessment and can make decisions to prioritize certain stages, collection only some of the information on the protocol, etc. Mr. Johnson gave a rough estimate that he knows 10 people who he interacted with or could have interacted with in the past year.

The screenshot shows a web application titled "Network Canvas Interviewer" in the browser window. The interface has a dark blue theme. On the left is a vertical sidebar with a hamburger menu icon at the top, an upward arrow icon, a vertical progress bar, and a large circular button with a downward arrow at the bottom. The main content area is a lighter shade of blue and contains a white rounded rectangle with the title "Estimated Network Size". Below the title is a paragraph of text asking for a rough estimate of the user's social network. Underneath this is a question "How many people would you guess this is?" followed by a dark input field containing the number "10".

Network Canvas Interviewer

File Edit View Develop Window

Estimated Network Size

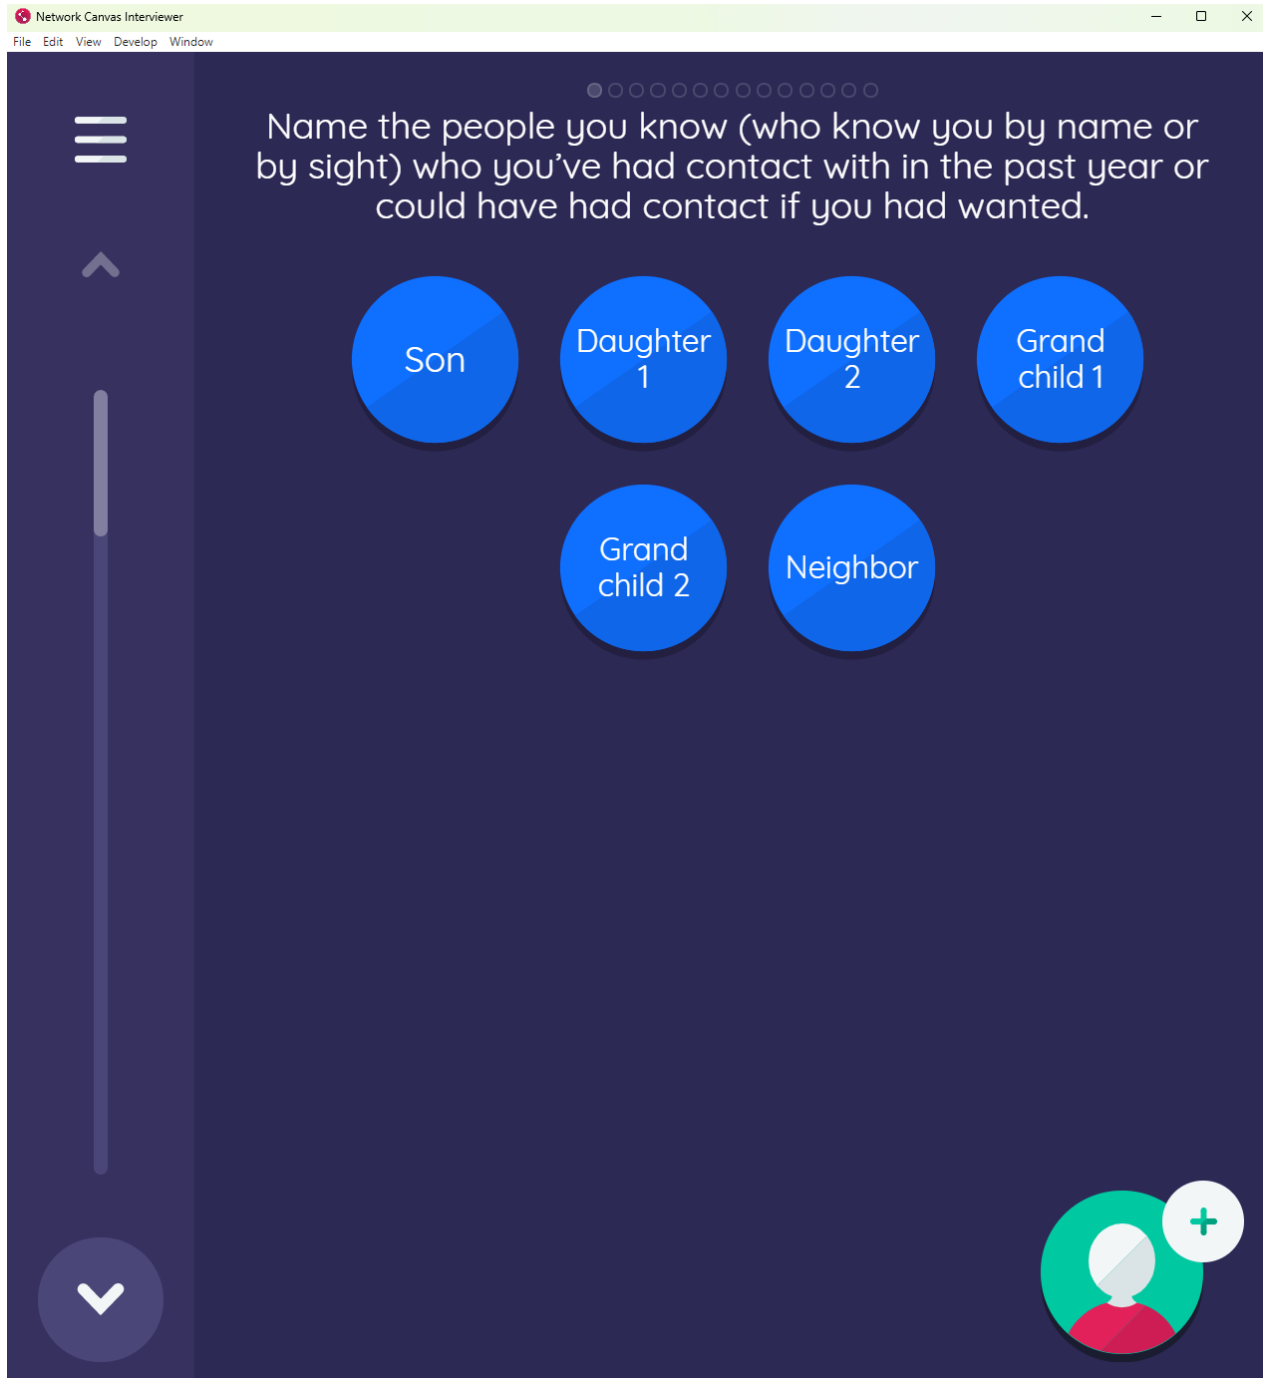

I'd like to get a rough estimate of the size of your social network. Think about all the people you know, who know you by sight or by name, and you have interacted with in the past year or could have if you had wanted.

How many people would you guess this is?

10

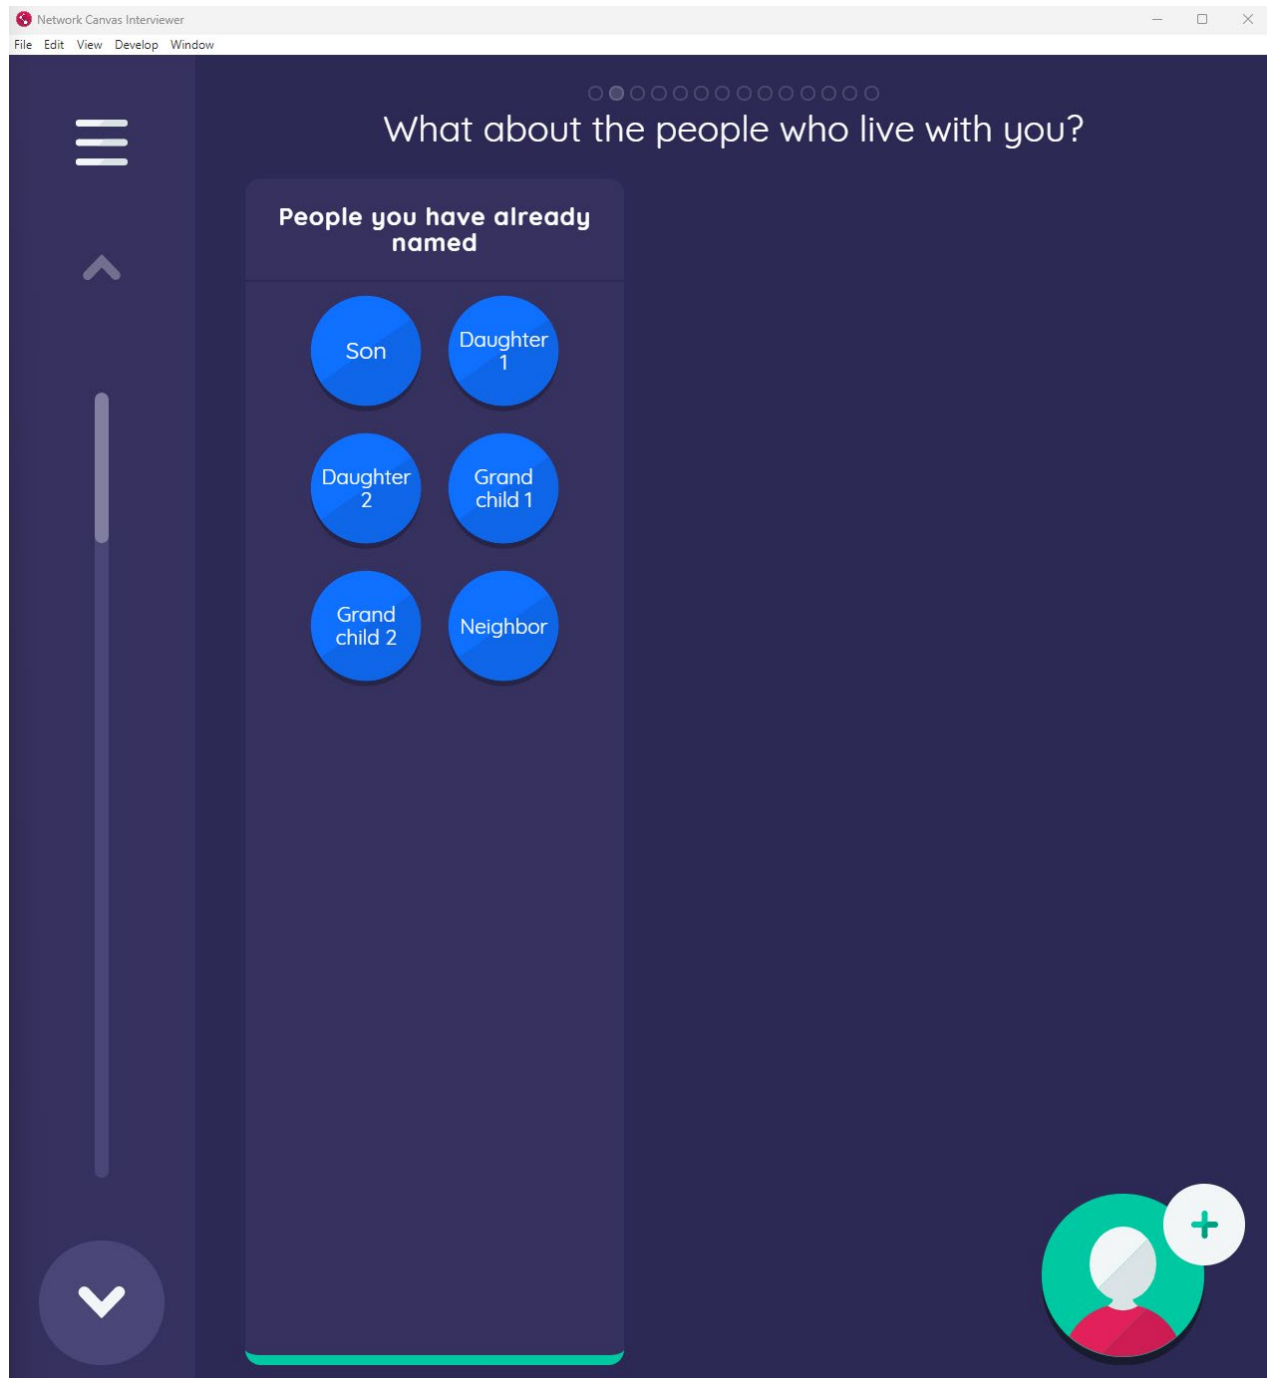

Stage 4. People You Know, Initial Interface

The first interface for the People You Know Stage solicits open-ended, free recall of network members, without any specialized prompting. The names are added using the icon with the person symbol and plus sign at the bottom right-hand corner of the screen. Mr. Johnson provided six people in response to the request to name the people he knew who he did or could have had contact with in the past year.

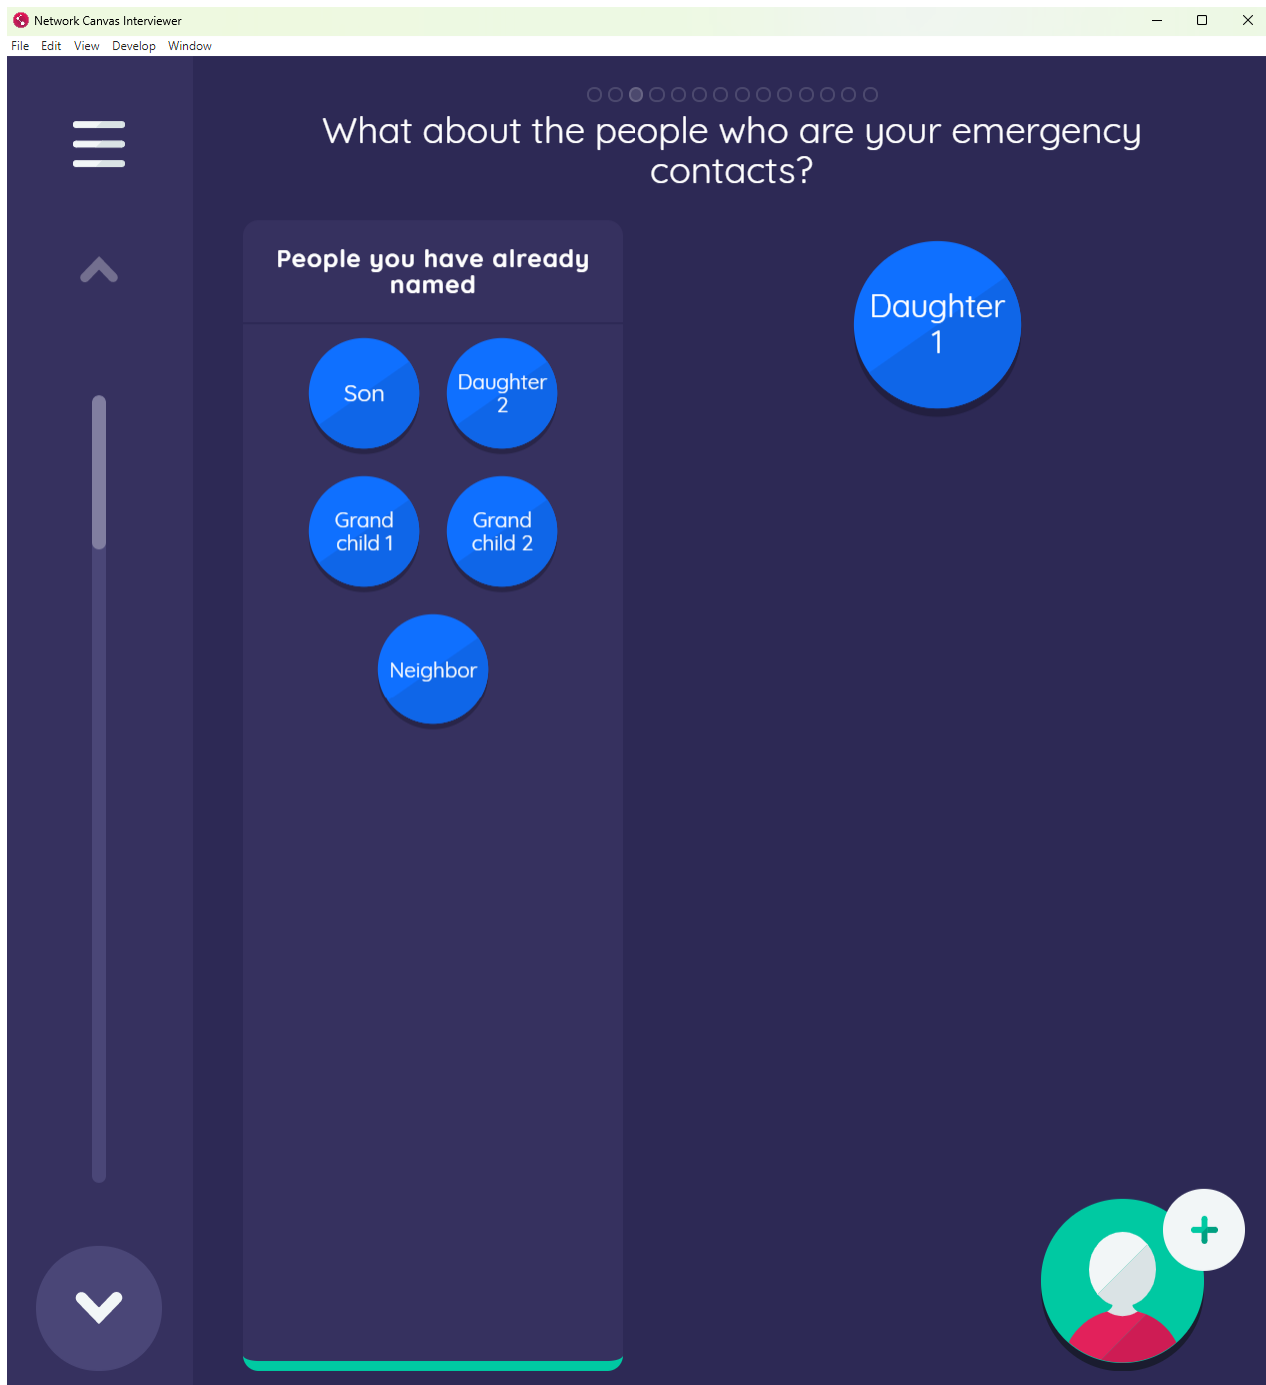

Stage 4. People You Know (Subsequent Prompts that Assist with Recall and Categorize Network Members)

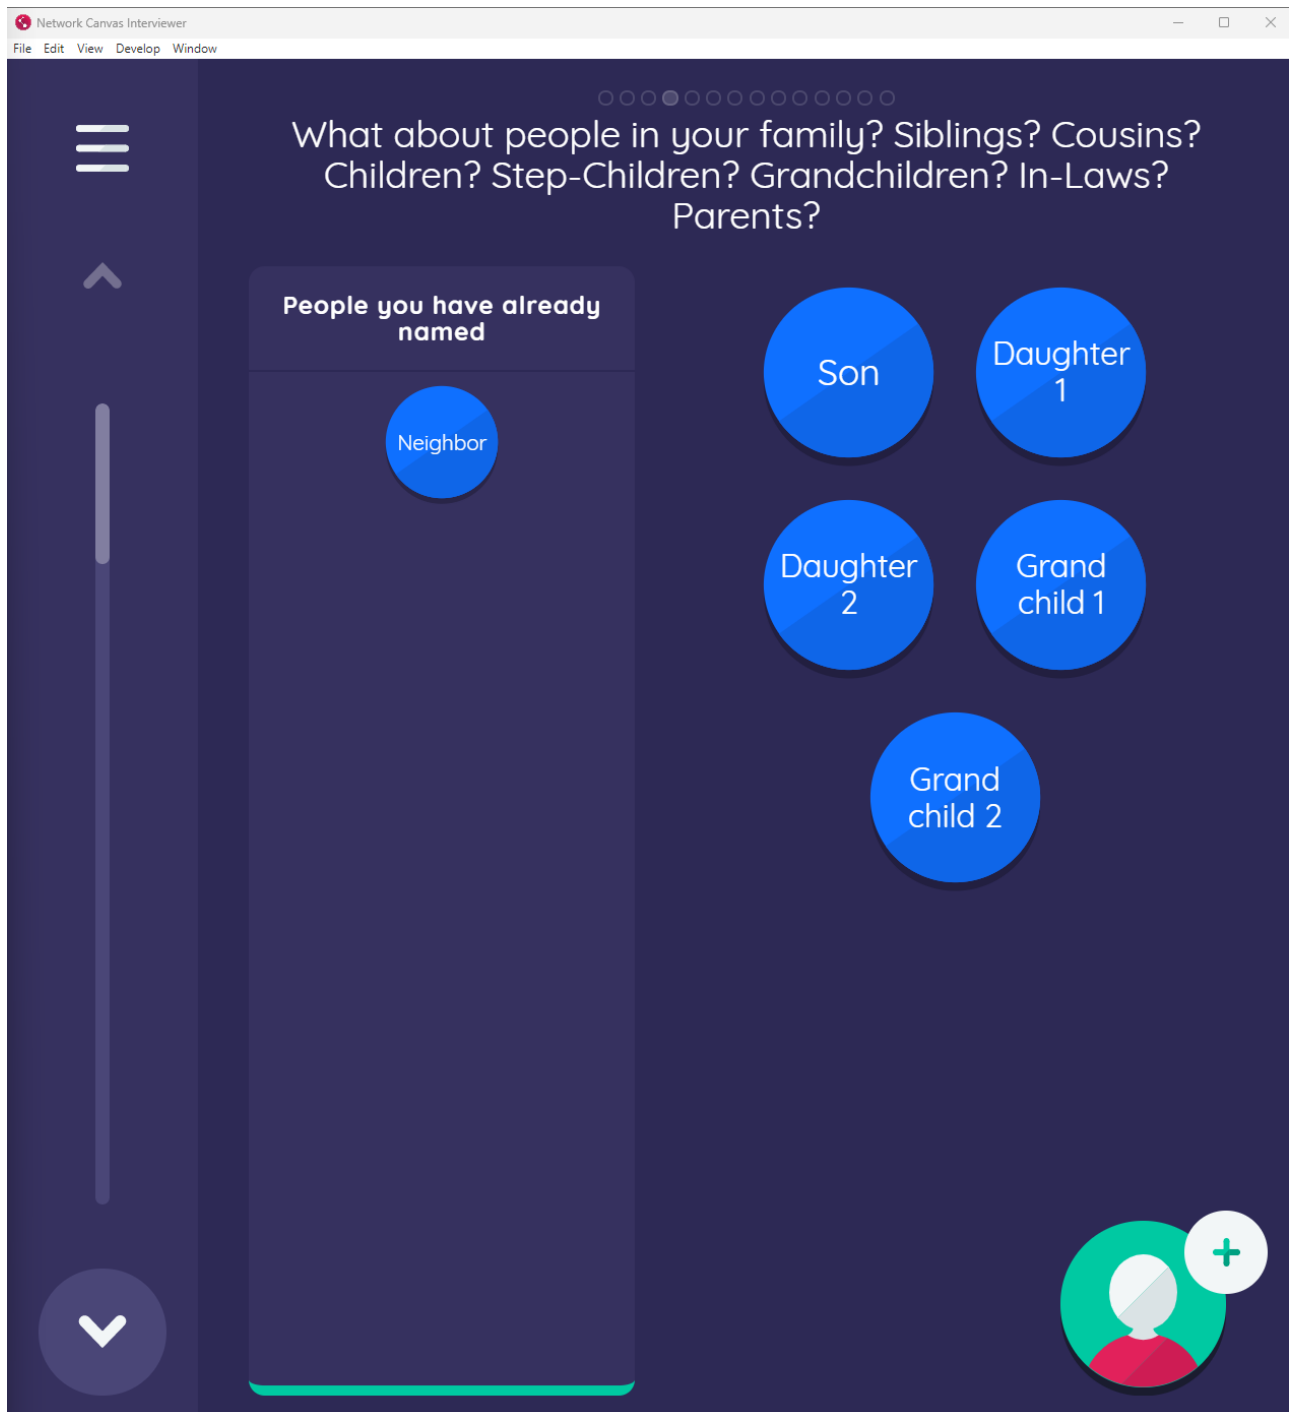

Following the opening question asking for the client to recall without prompting, there are a series of interfaces with specific prompts. SNAAPS provides the list of people who have already been named in case they can be added to the data collection interface for the various prompts that ensure. This prompt is about people who live with the client and because Mr. Johnson lives alone the interviewer continues to the next prompt without adding names to the interface, but could have either dragged nodes from the people you have already named box or added new names.

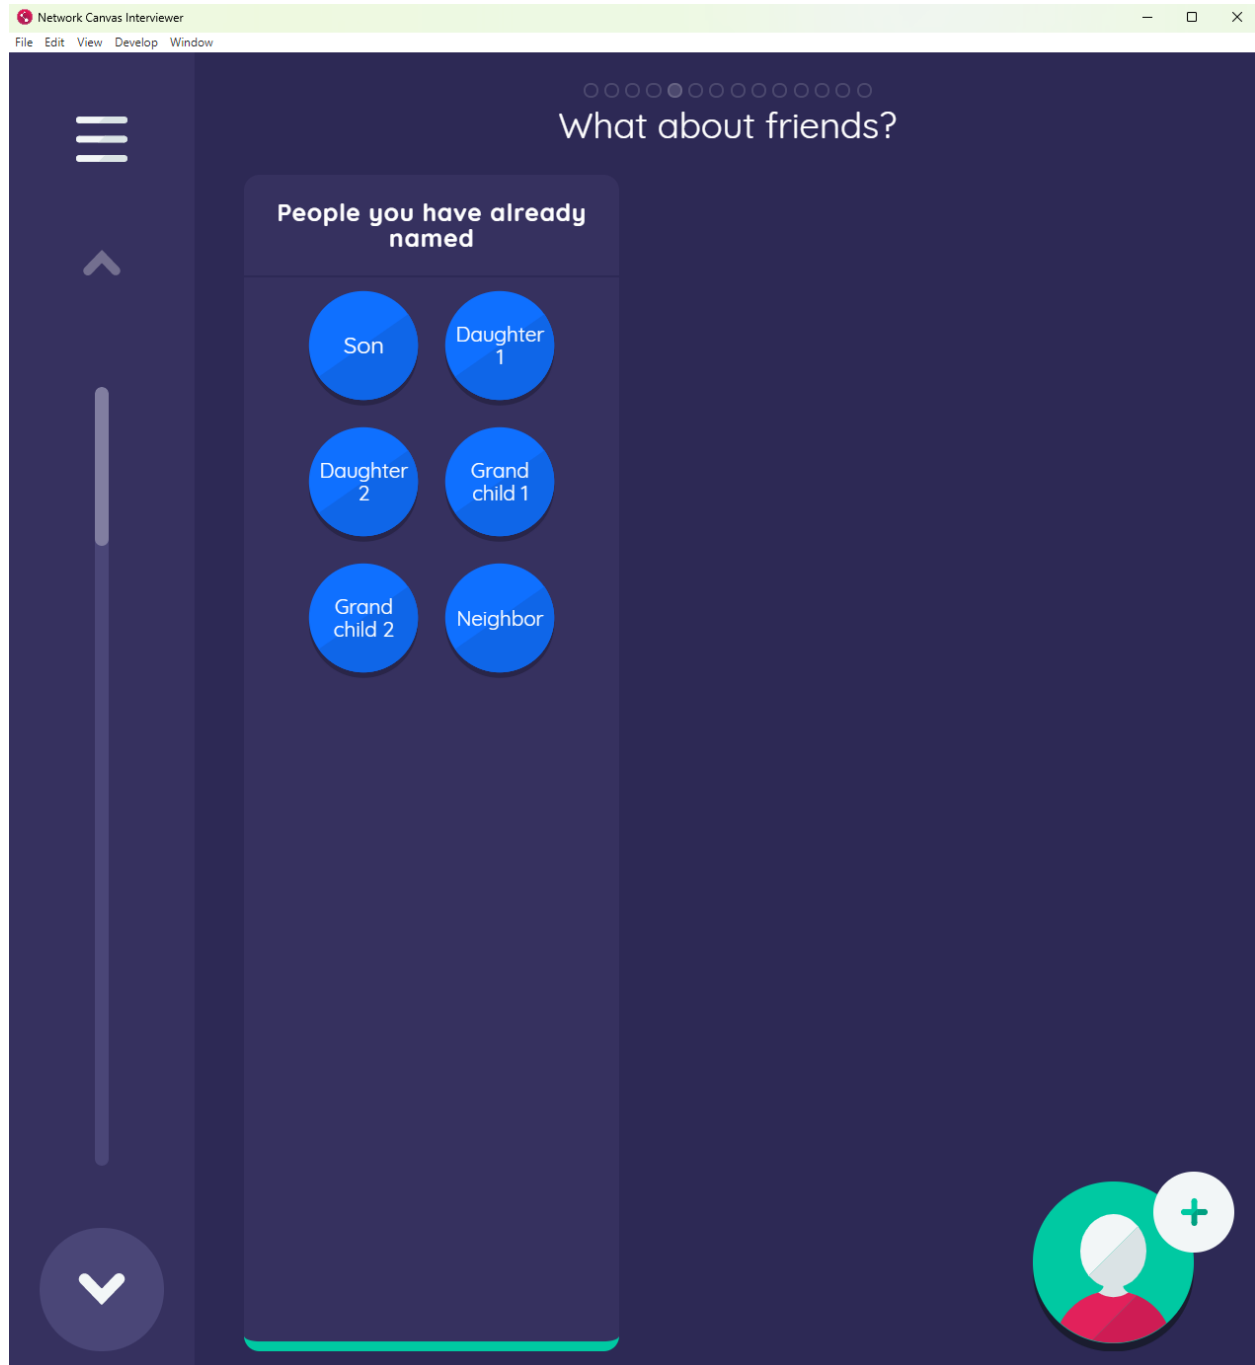

Mr. Johnson's first daughter is his emergency contact, so her node is dragged from the box containing people he has already named in response to the prompt, "What about the people who are your emergency contacts?"

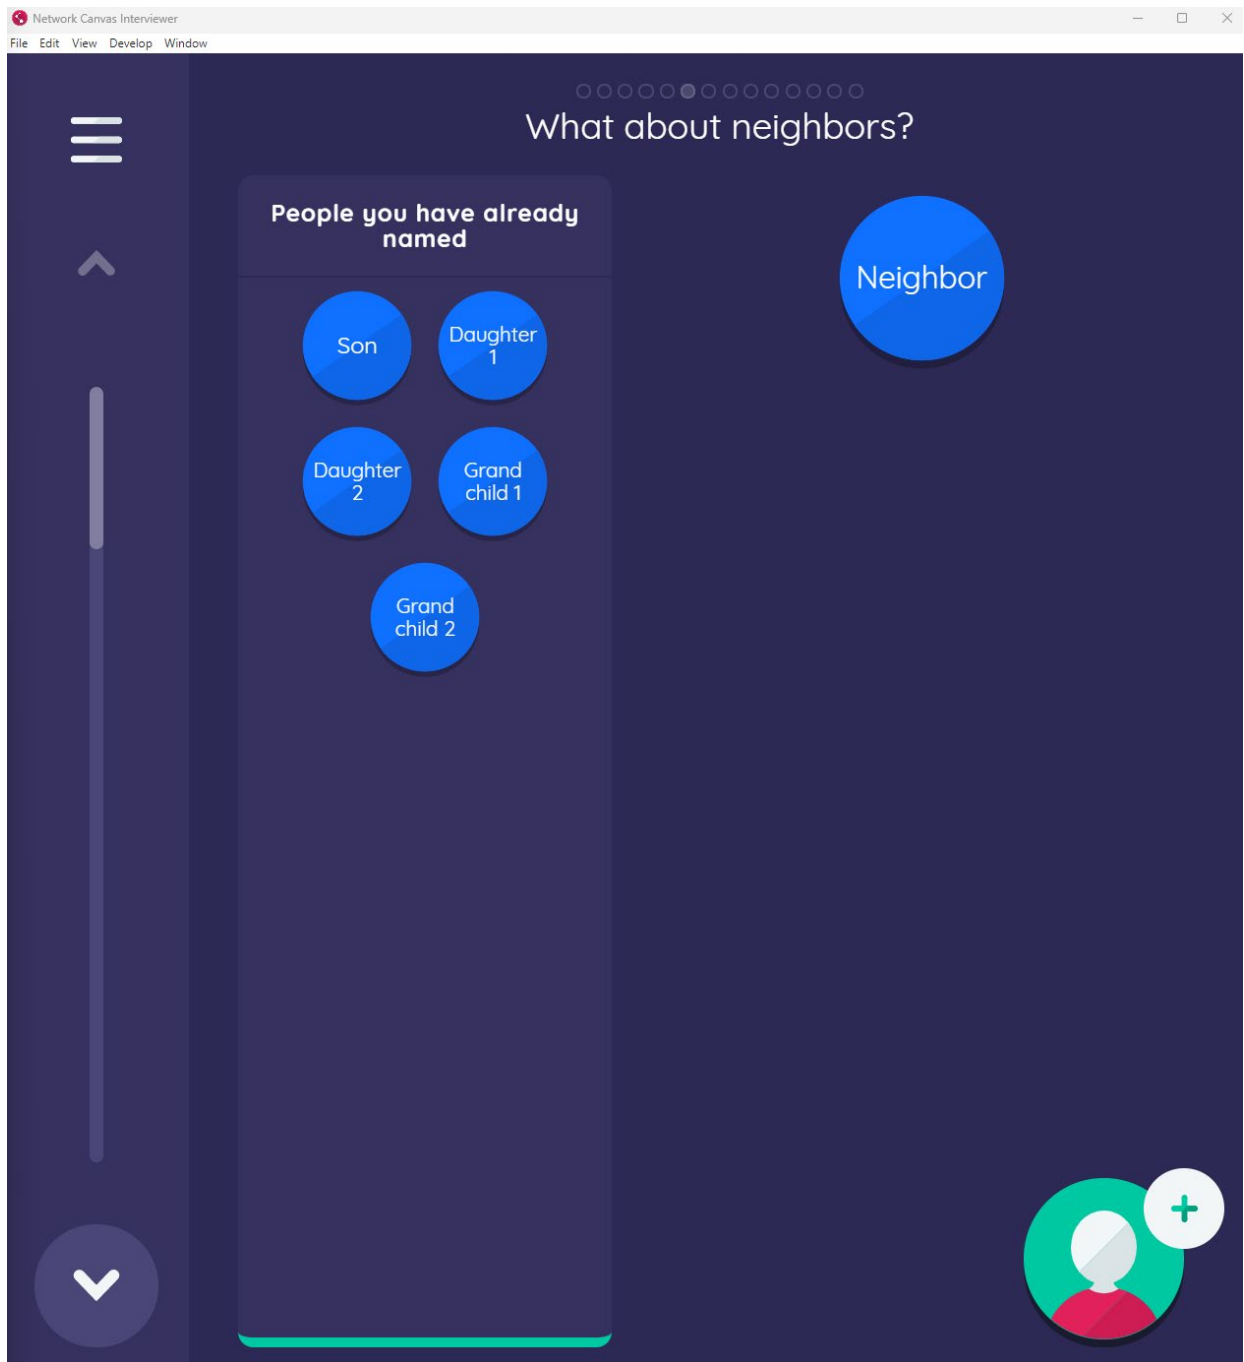

Mr. Johnson doesn't have any new family members to add, so the ones he has already named are dragged into the interface and no additional names are added.

Mr. Johnson doesn't add any friends to the network of people he knows.

In response to this prompt, “What about neighbors?”, Mr. Johnson indicates that the non-family member he previously named is a neighbor, so this node is dragged into the interface here.

Mr. Johnson doesn't add anyone from a religious organization.

What about people at church, synagogue, mosque, or temple, etc.?

People you have already named

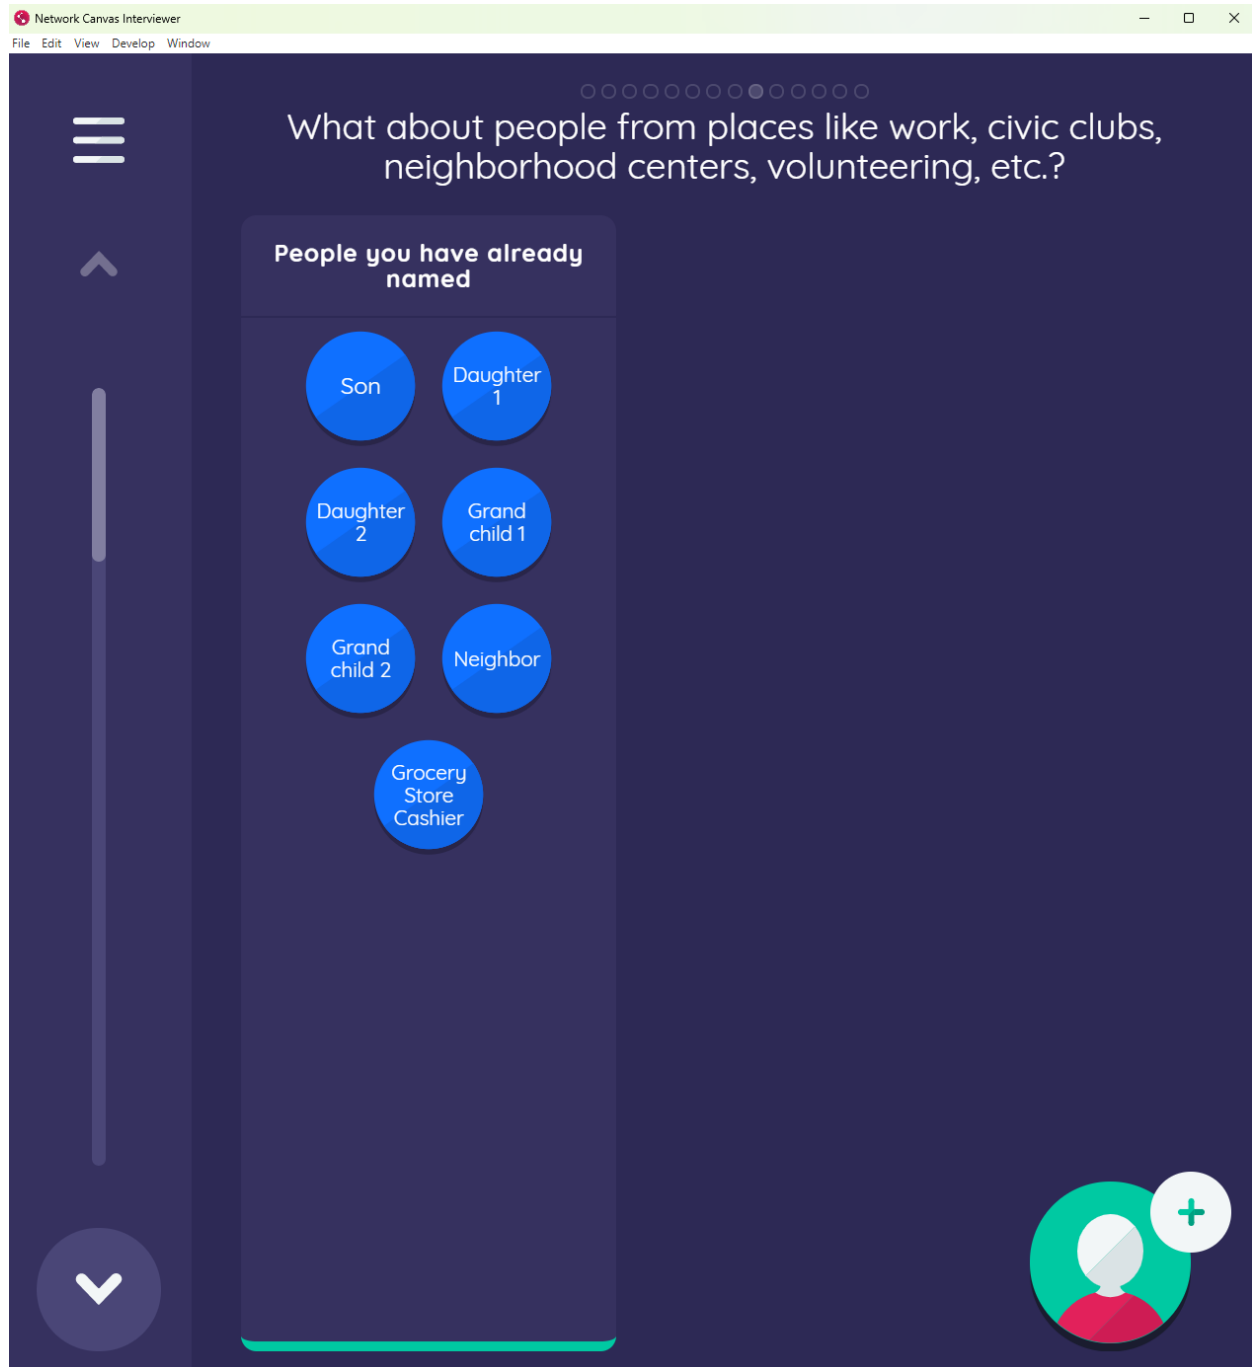

- Son
- Daughter 1
- Daughter 2
- Grand child 1
- Grand child 2
- Neighbor

+

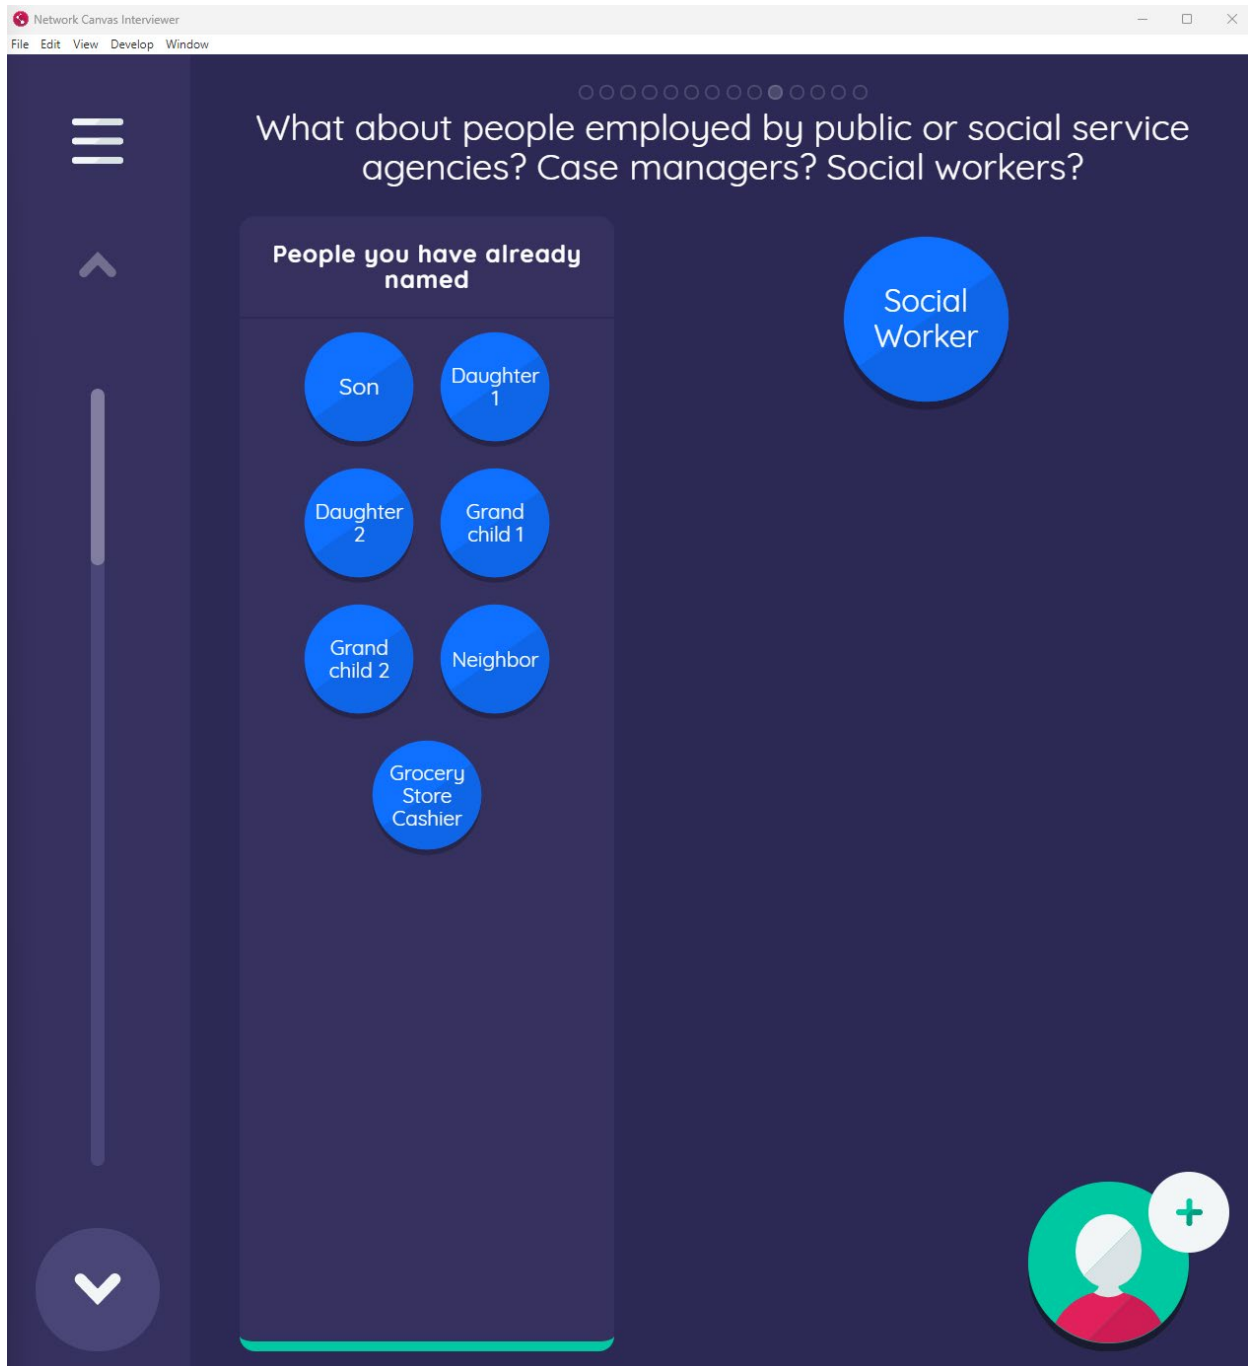

In response to the prompt, “What about people at places you often go (e.g., bank, restaurants/bars, stores)?”, Mr. Johnson remembers he knows the grocery store cashier and they get added here.

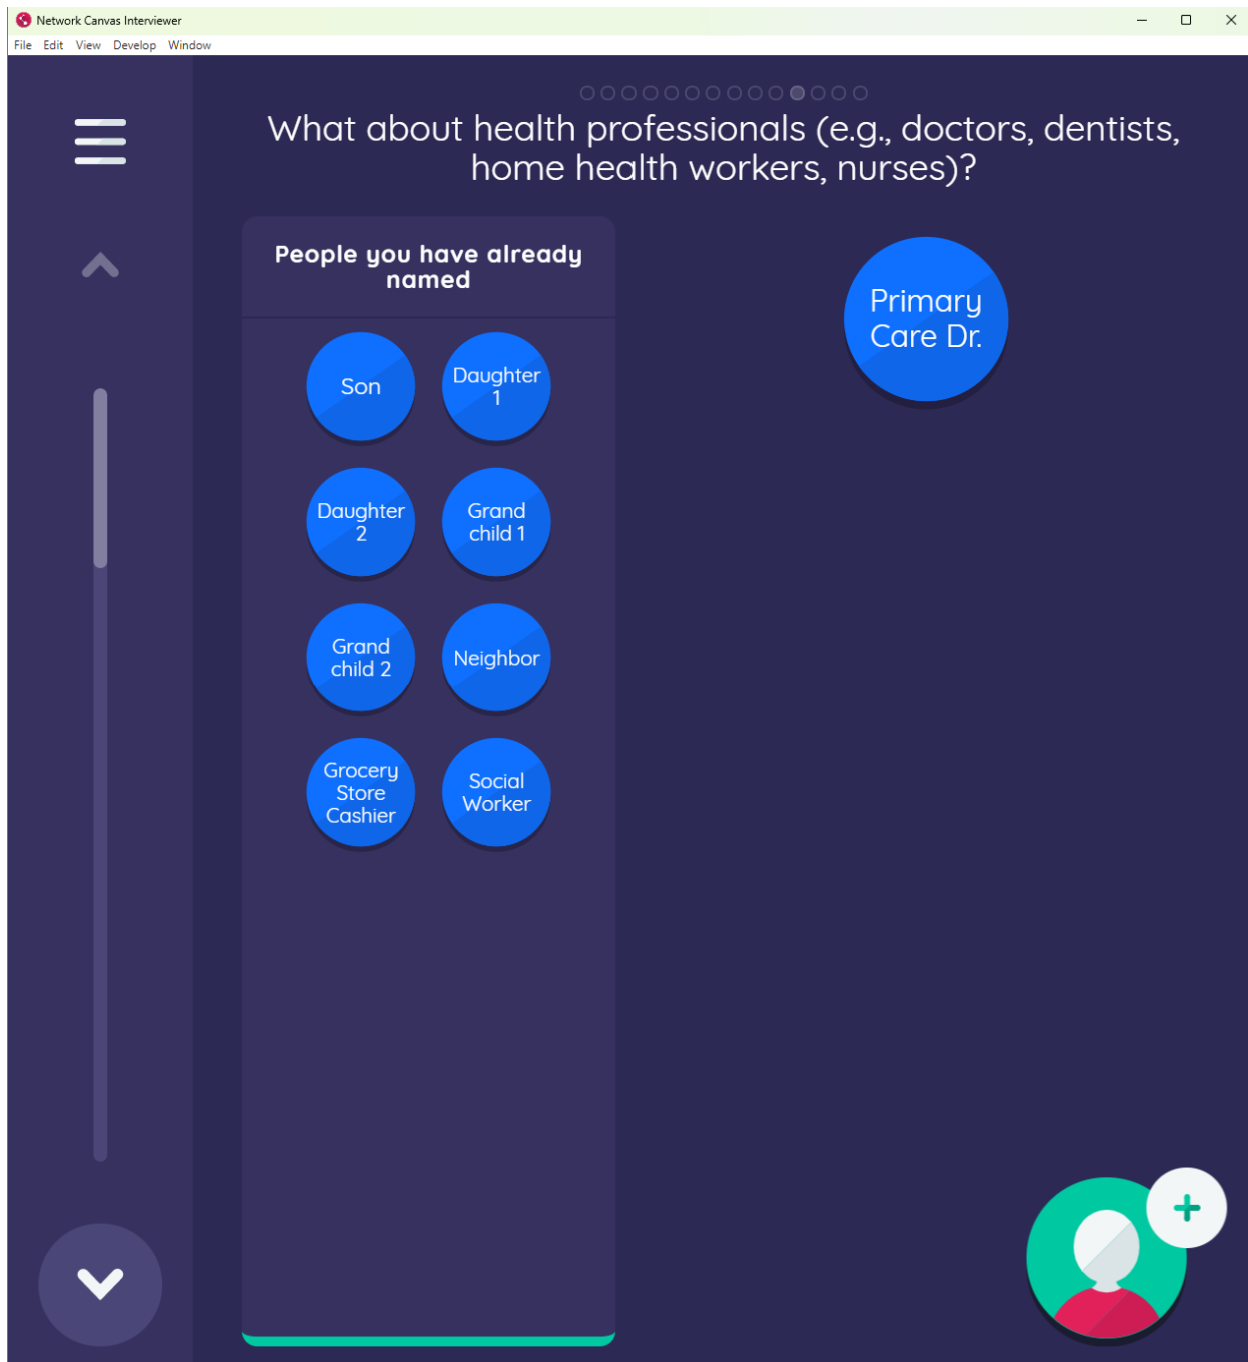

Mr. Johnson doesn't add anyone from places like work, civic clubs, neighborhood centers, volunteering, etc. to the network of people he knows.

When prompted with, “What about people employed by public or social service agencies? Case managers? Social workers?”, Mr. Johnson adds his home health social worker to the growing list of people he knows.

The last person Mr. Johson adds that he knows is his primary care physician on this screen asking him, “What about health professionals (e.g., doctors, dentists, home health workers, nurses)?”

Mr. Johnson doesn't add any mental health professionals.

What about professionals for your mental/emotional health (e.g., counselors, support group leaders)?

People you have already named

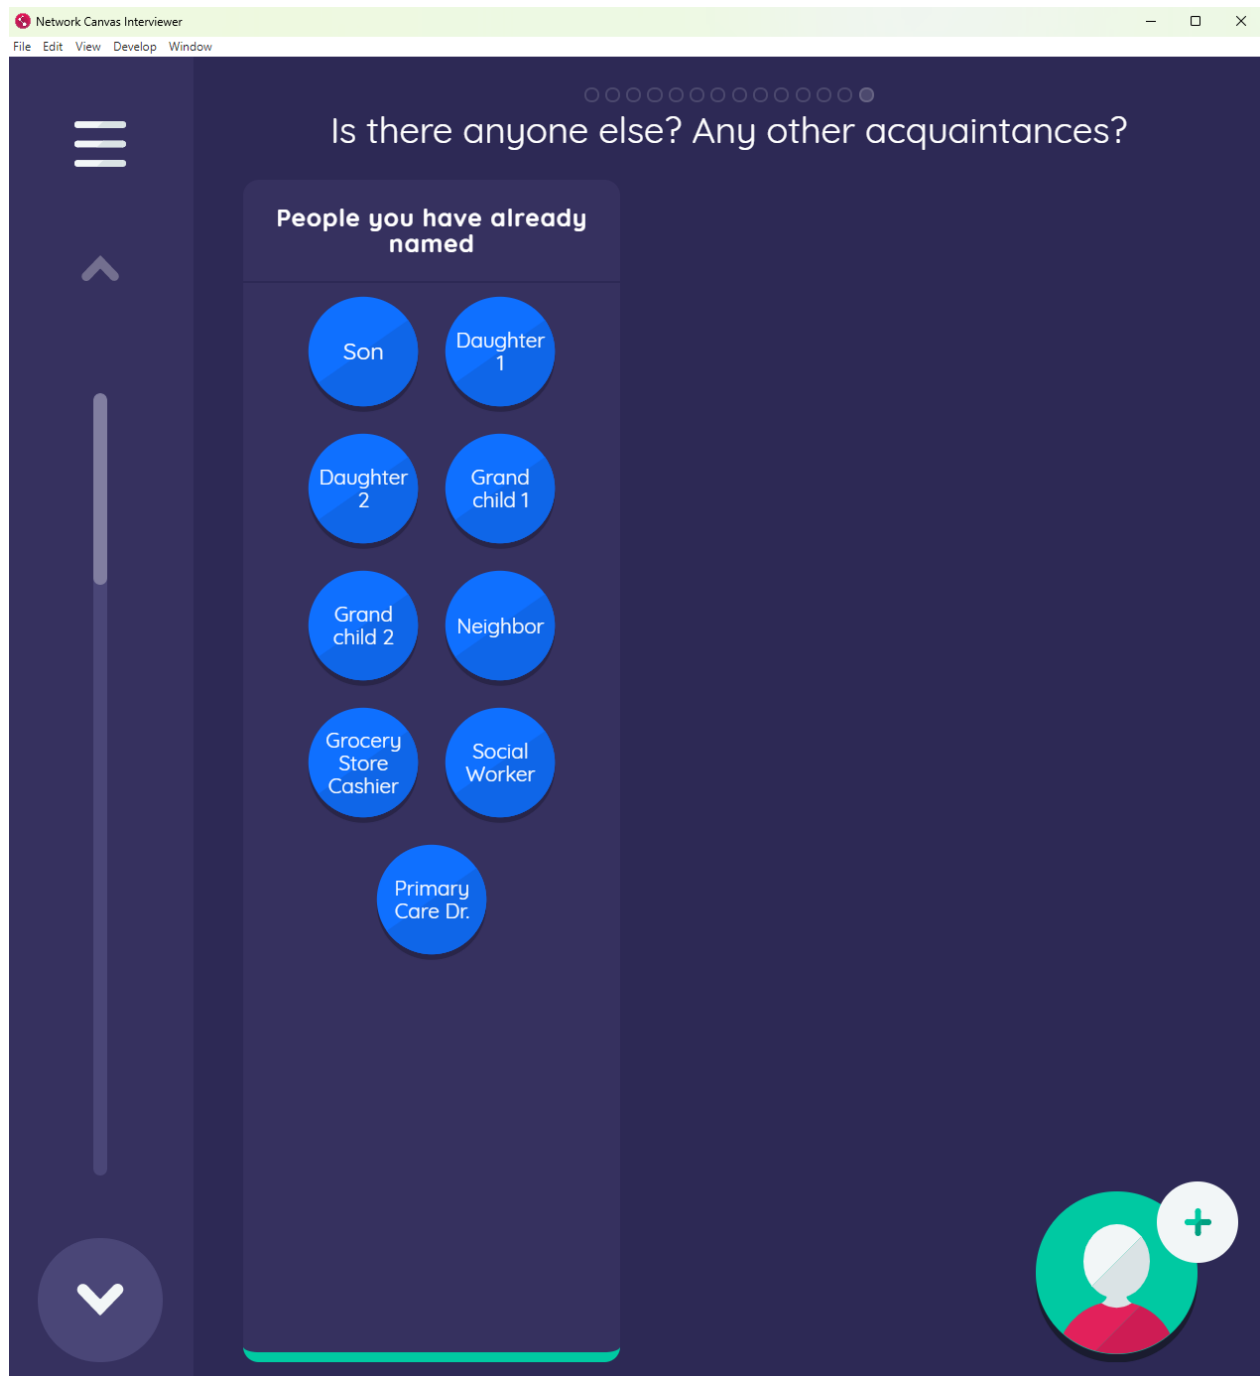

- Son
- Daughter 1
- Daughter 2
- Grand child 1
- Grand child 2
- Neighbor
- Grocery Store Cashier
- Social Worker
- Primary Care Dr.

+

Mr. Johnson doesn't add new important people.

This final prompt seeks to elicit any other people that the client knows before moving on to ask about specialized relationship types, namely support and conflict. Mr. Johnson doesn't add anyone else.

Stage 5. People Who Support You

The “People Who Support You Stage” collects information about a variety of types of support. For this first interface about emotional support, Mr. Johnson names all his family members and the grocery store cashier.

The screenshot shows a web application window titled "Network Canvas Interviewer". The main heading is "Who provides you with emotional support (is kind or considerate toward you, cheers you up, helps you feel better)?" with four progress dots above it. On the left is a dark sidebar with a menu icon, an upward arrow, a vertical scrollbar, and a downward arrow. The main area is divided into two sections. The first section, titled "People you have already named", contains three blue circular buttons labeled "Neighbor", "Social Worker", and "Primary Care Dr.". The second section contains six blue circular buttons labeled "Son", "Daughter 1", "Daughter 2", "Grand child 1", "Grand child 2", and "Grocery Store Cashier". In the bottom right corner, there is a green circular icon with a white plus sign and a red circle, indicating an option to add more people.

Mr. Johnson indicates his children and neighbor provide him with tangible support and continues to answer the questions for the next two interfaces about network members who give him informational and healthcare support.

- Grocery Store Cashier
- Social Worker
- Primary Care Dr.

- Son
- Daughter 1
- Daughter 2
- Neighbor

+

Stage 6. People Involved with Your Financial Affairs

Stage 6 has several prompts designed to gather a comprehensive understanding of network involvement in finances. As Mr. Johnson responds to the prompts, he names his neighbor for quite a few of the types of financial involvement.

The screenshot displays the 'Network Canvas Interviewer' application window. The main question is 'Who helps you manage your financial accounts or bill paying?'. A list of roles is provided for selection, with 'Neighbor' chosen. The interface includes a sidebar with navigation icons and a progress indicator at the top.

Stage 7. How Often Do You Interact with the People You Know

In this stage, Mr. Johnson indicates how often he sees each of his network members. He has weekly or bi-weekly contact with most of the people in his network, and daily contact with his neighbor.

Network Canvas Interviewer

File Edit View Develop Window

How often do you interact with this person? (by phone, email, text, social media, or other). Pick the best choice.

Daily	Weekly/bi-weekly	Monthly	A few times a year	Yearly or less
Neighbor	Son	Social Worker	Primary Care Dr.	
	Daughter 1			
	Daughter 2			
	Grand child 1			
	Grand child 2			
	Grocery Store Cashier			

Stage 8. Type of Family Member

After Mr. Johnson provided additional information about his family members, the labels indicate the number of family members in each category (e.g., Child or step-child has “son” – the name provided earlier in the interview and 2 others). These circles can be expanded to provide a detailed accounting of the network members in the category as shown on the next page.

The screenshot shows a web application titled "Network Canvas Interview" with a dark blue background. On the left is a vertical sidebar with a hamburger menu icon at the top, an upward arrow icon, a vertical scrollbar, and a circular button with a downward arrow at the bottom. The main content area is titled "How is this person related to you?". It contains six colored circles arranged in a 3x2 grid, each representing a relationship category. The categories and their associated counts are: "Spouse or domestic partner" (cyan circle), "Significant other" (magenta circle), "Child or step-child" with "Son and 2 others" (yellow circle), "Sibling" (pink circle), "Parent, step-parent" (green circle), and "Other" with "Grand child 1 and 1 other" (teal circle).

Relationship Category	Count / Details
Spouse or domestic partner

other

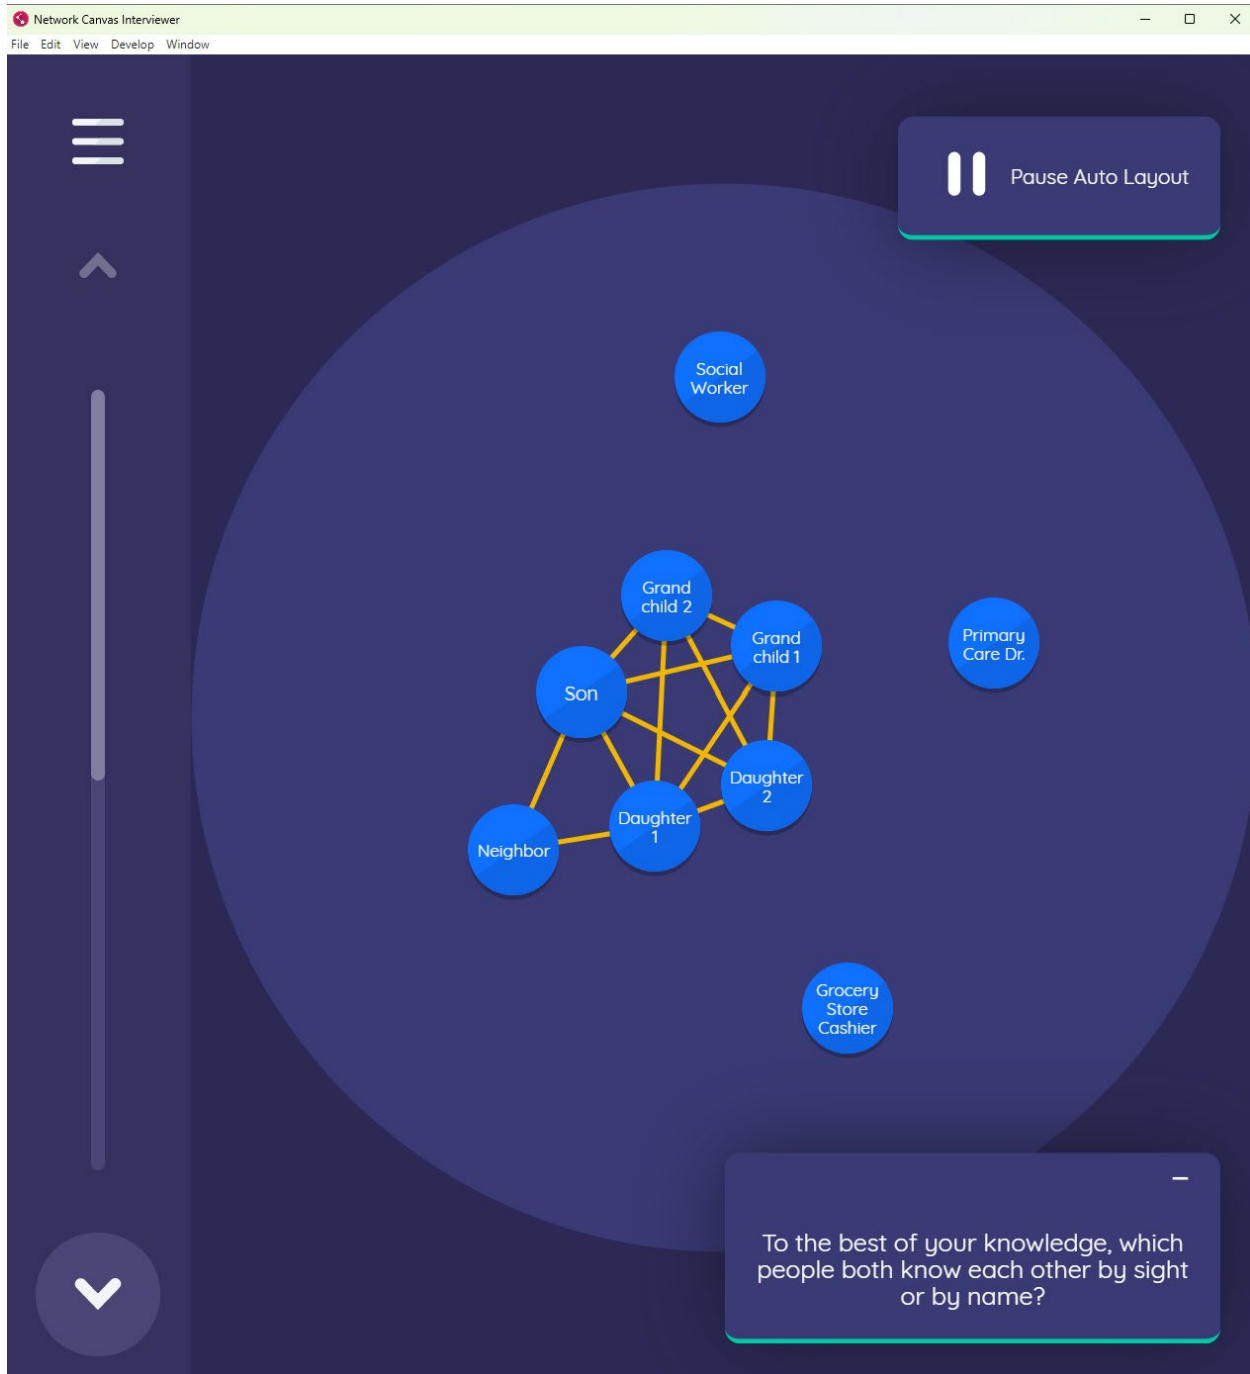

Sibling

Parent,
step-
parent

Other
Grand child 1
and 1 other

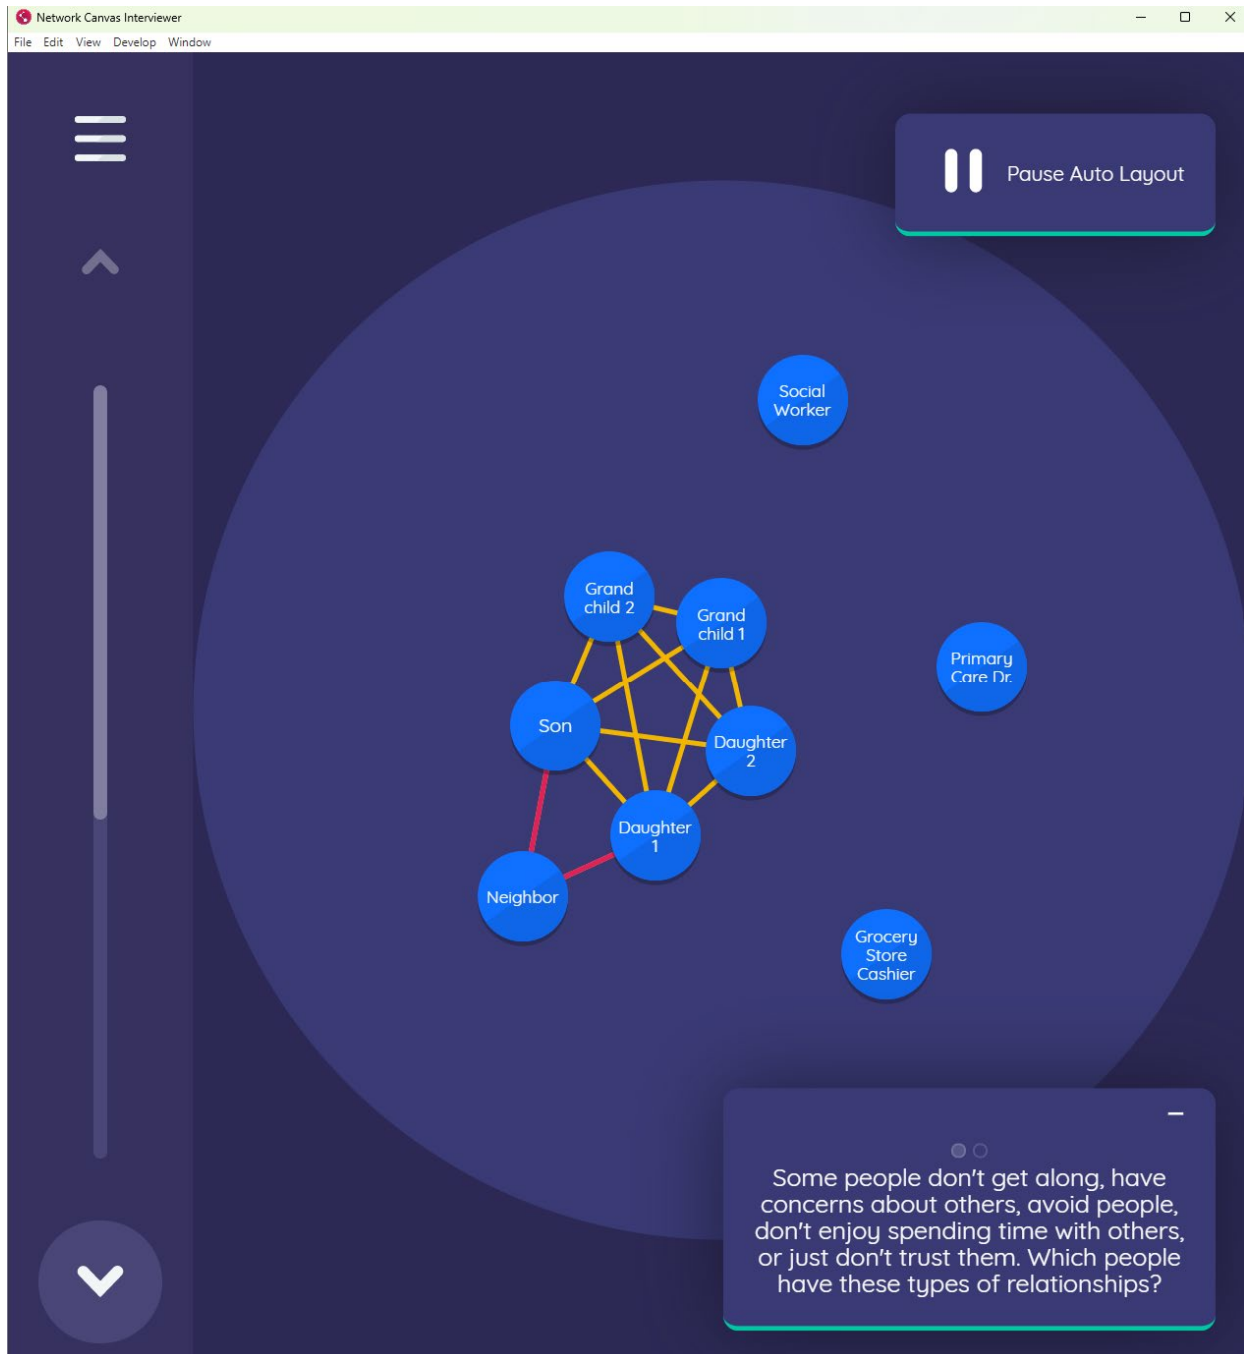

Stage 9. Who Knows Who

In this stage, the social network is built by clicking on the nodes representing two people who know each other. The lines between people who know each other are yellow. This layout was created by an automated algorithm, but the practitioner can pause the auto layout (see the pause button in the upper right corner) and drag nodes manually to create a customized layout.

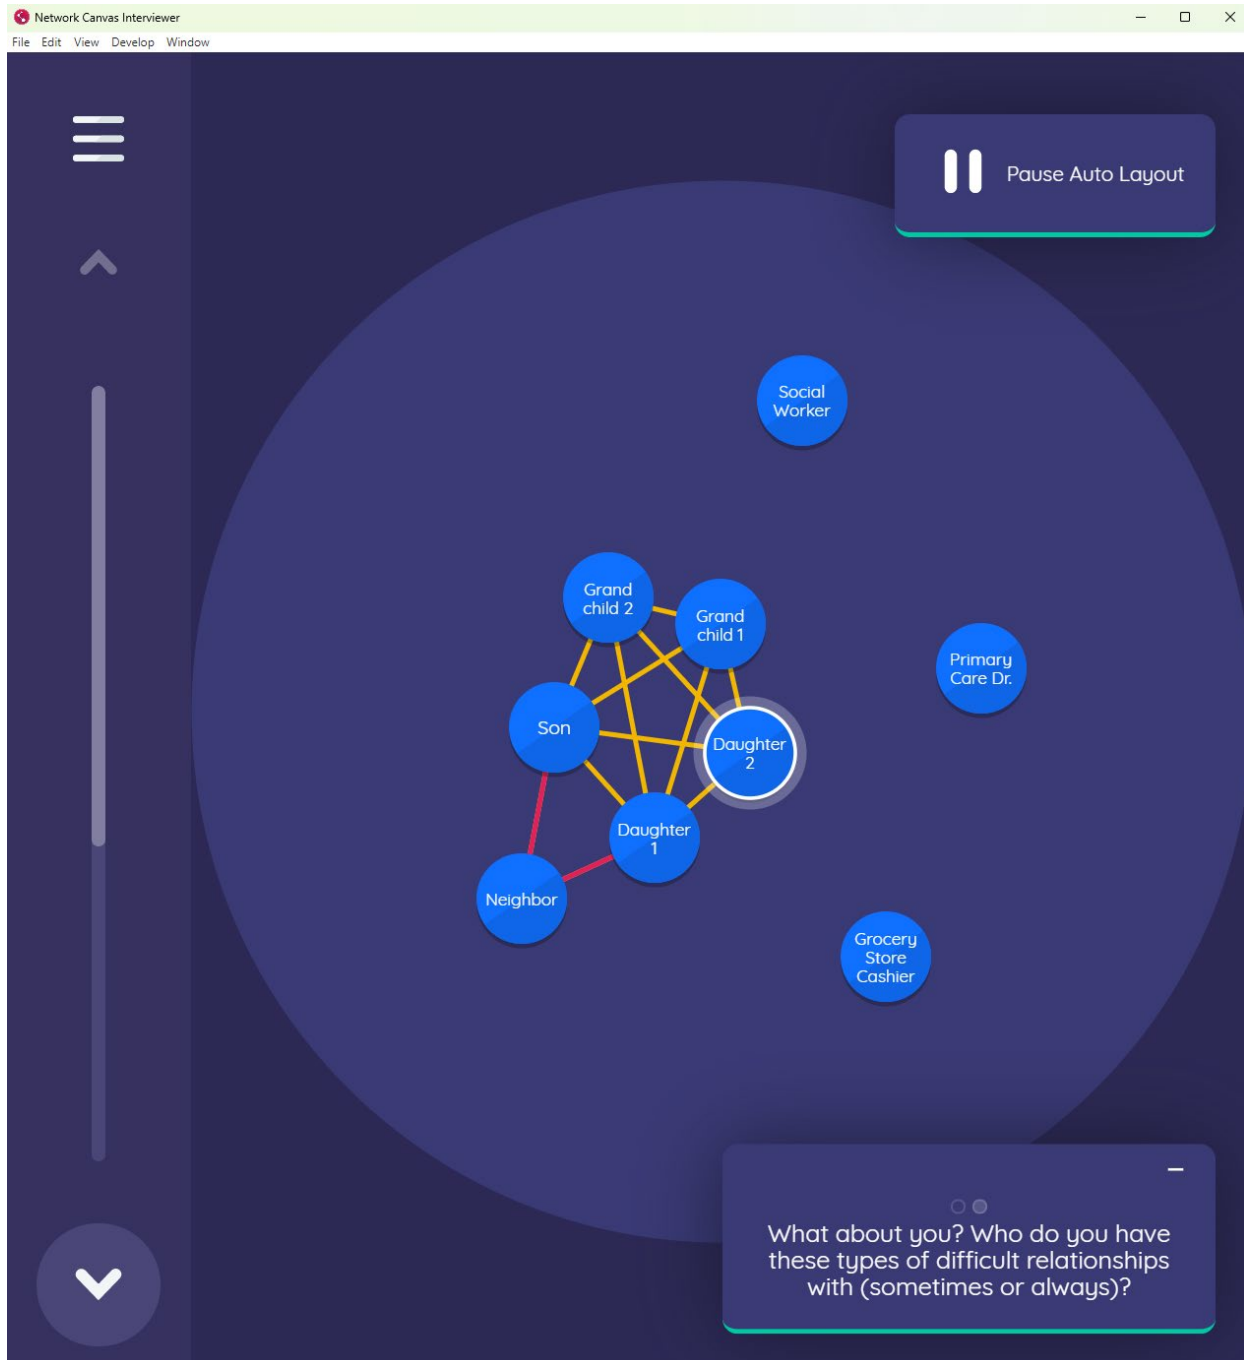

Stage 10. Conflict in Your Network

Initially in the next stage about conflict or difficult relationships, the network visualization showing who knows whom is shown. This saves time in data collection because the client and interviewer don't have to reconsider all the options again but can easily look at the people who know one another. The difficult relationship ties are added in the same way as before—by clicking on the two people who have a difficult relationship and the conflicted tie is represented in red and overlaid on the original, yellow “knows one another” tie. Mr. Johnson reports that his son and 1st daughter each have issues with his neighbor.

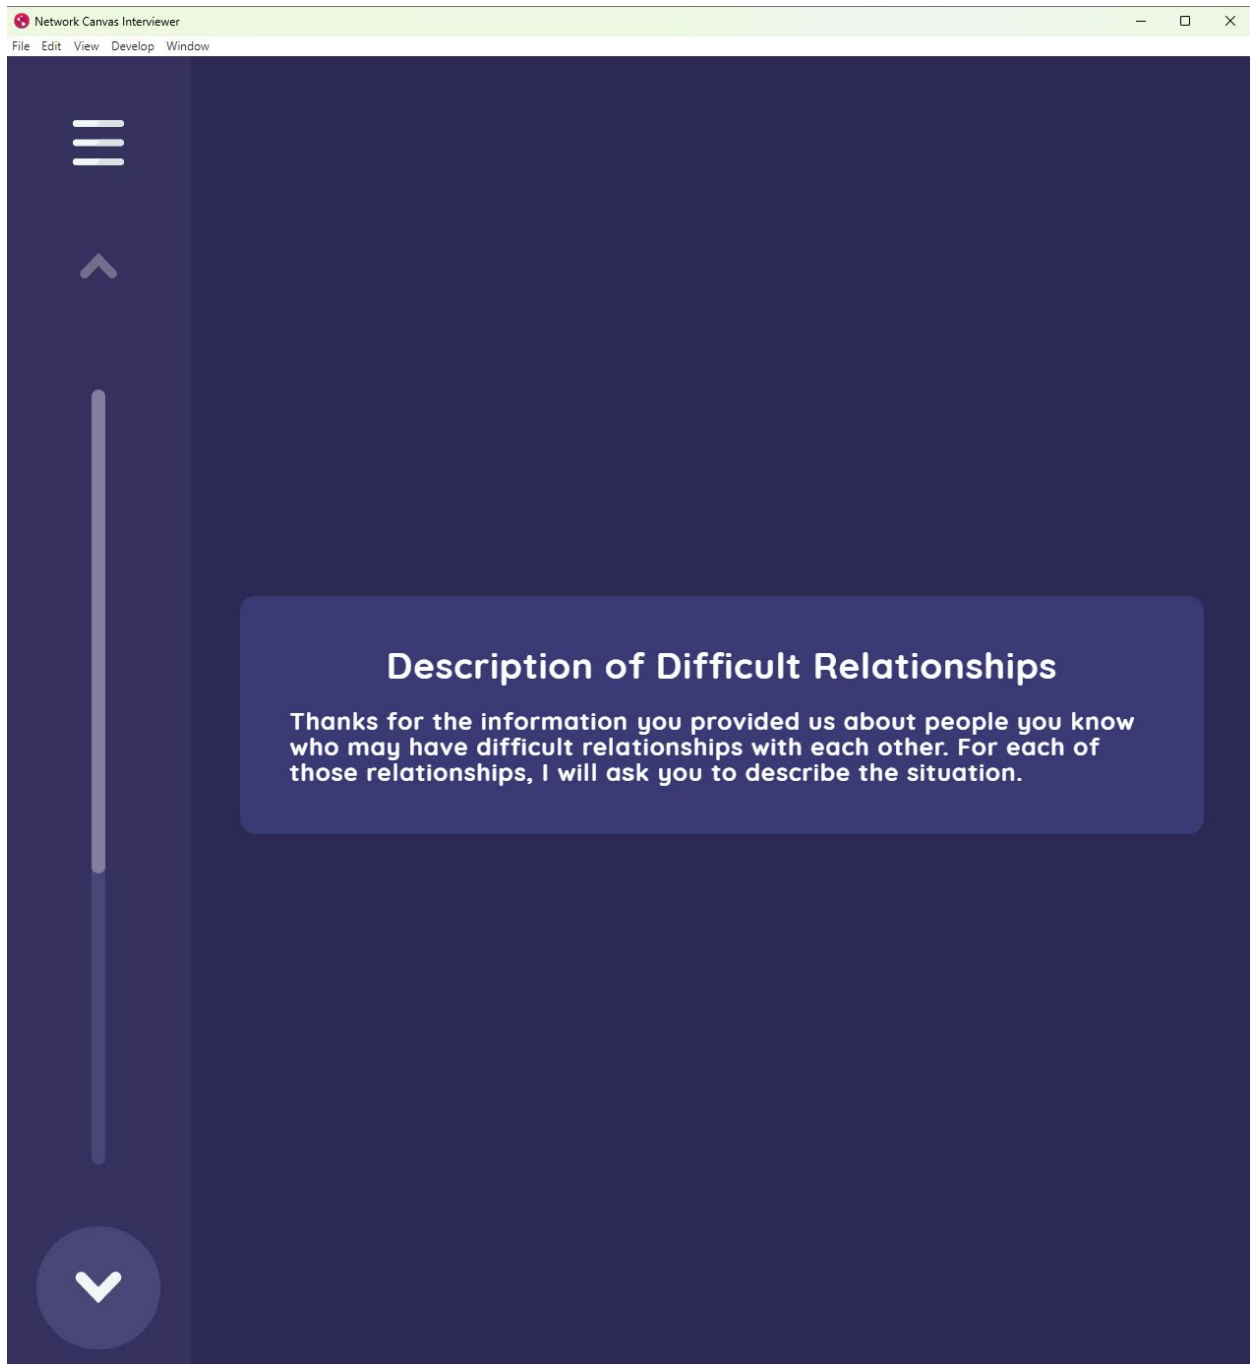

After asking about network members who have difficulty among themselves, SNAAPS presents a question for the client to report if they have any difficulty with anyone in their network. Mr. Johnson names his 2nd daughter and the interviewer clicks on the node, which is then highlighted with a halo for easy visual identification.

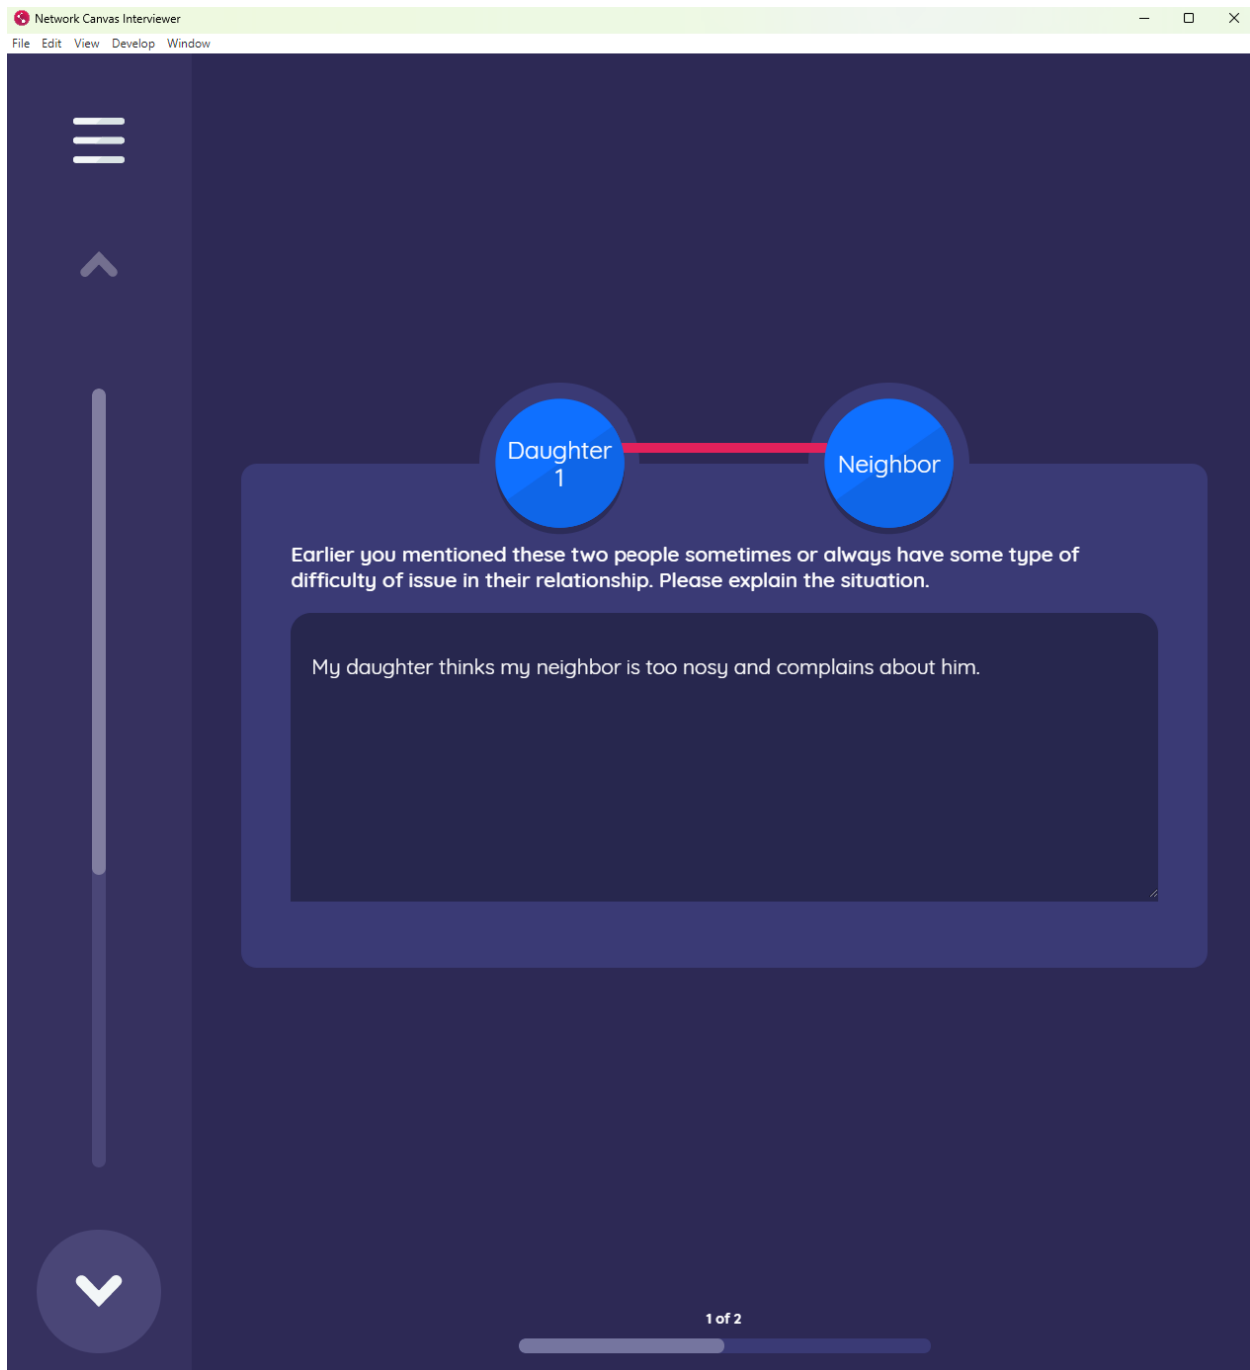

Stage 11. Nature of Difficulty Among Network Members

If the practitioner chooses, they can probe into the nature of the conflicted or difficult relationships among network members and record it within SNAAPS.

Here and in the next interface, Mr. Johnson provides some details about the nature of the difficulties between his children and his neighbor.

Son

Neighbor

Earlier you mentioned these two people sometimes or always have some type of difficulty of issue in their relationship. Please explain the situation.

My son met my neighbor when they were helping me replace a door on my shed. They got in an argument and don't really like each other.

Stage 12. Nature of Difficulty with Network Member

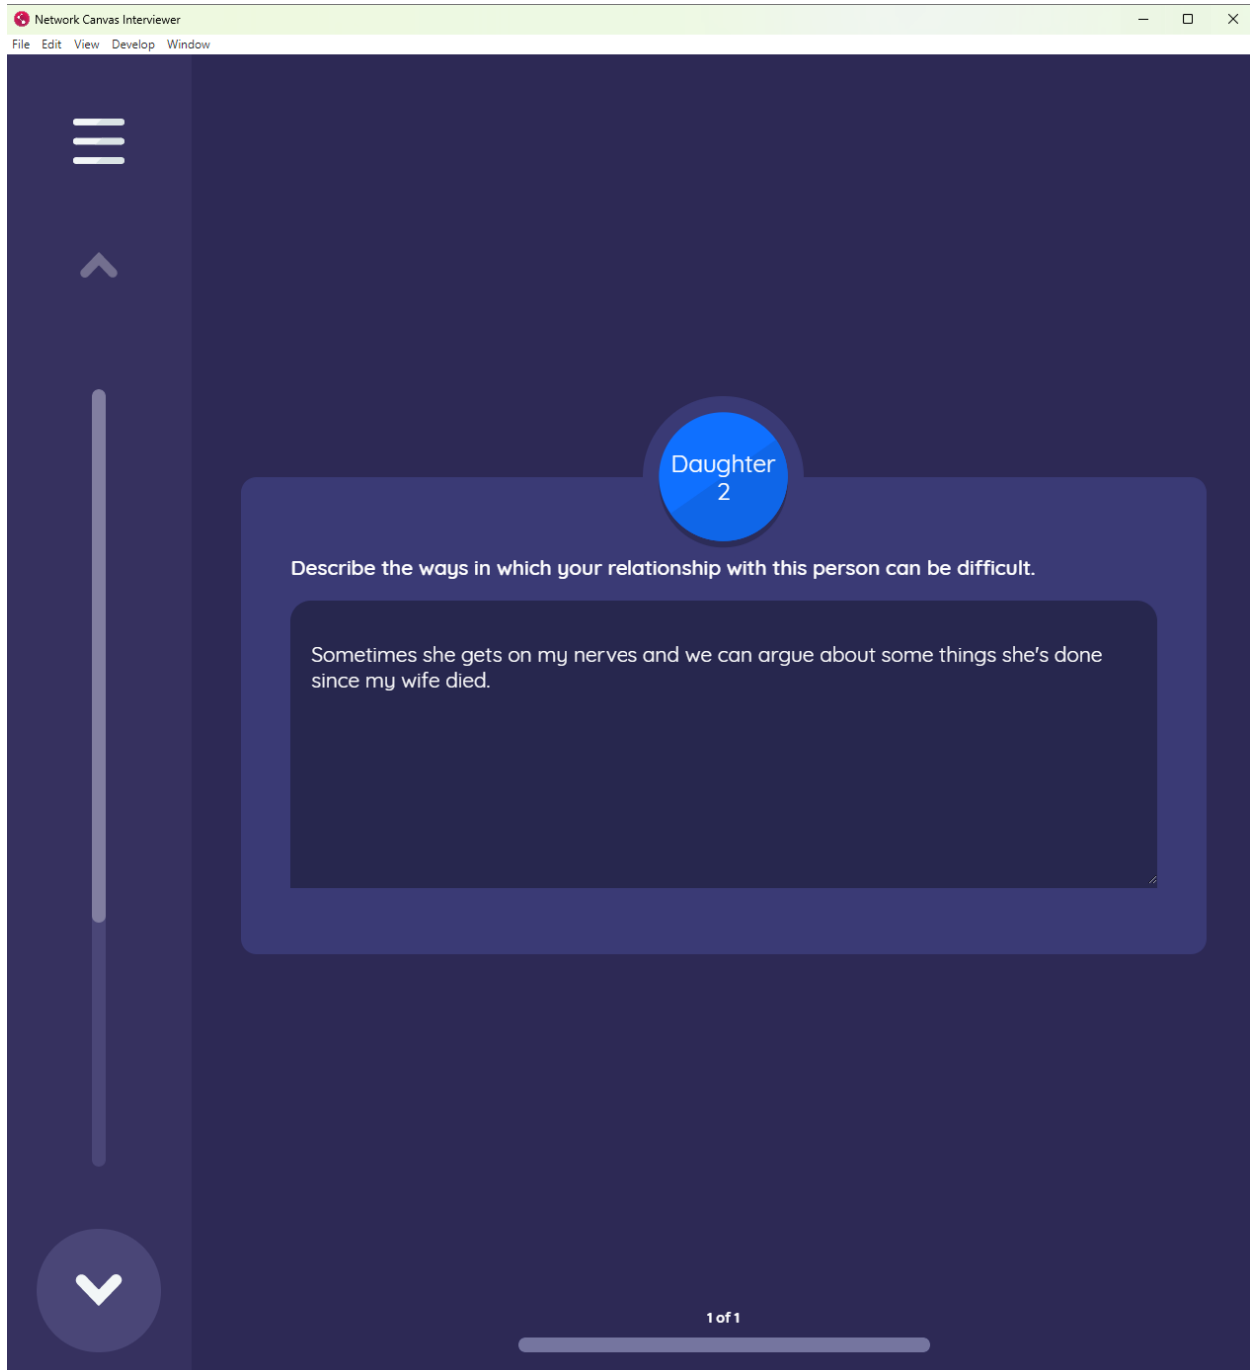

There is also an opportunity to collect information about the nature of the difficulties in the relationships that the client has with any of their networks members.

The screenshot shows a web application window titled "Network Canvas Interviewer". The interface has a dark blue background. On the left side, there is a vertical sidebar with a hamburger menu icon at the top, an upward-pointing arrow icon, a vertical scrollbar, and a circular button with a downward-pointing arrow at the bottom. The main content area is a lighter shade of blue and contains a white-bordered box with the following text:

Difficulty with Network Member

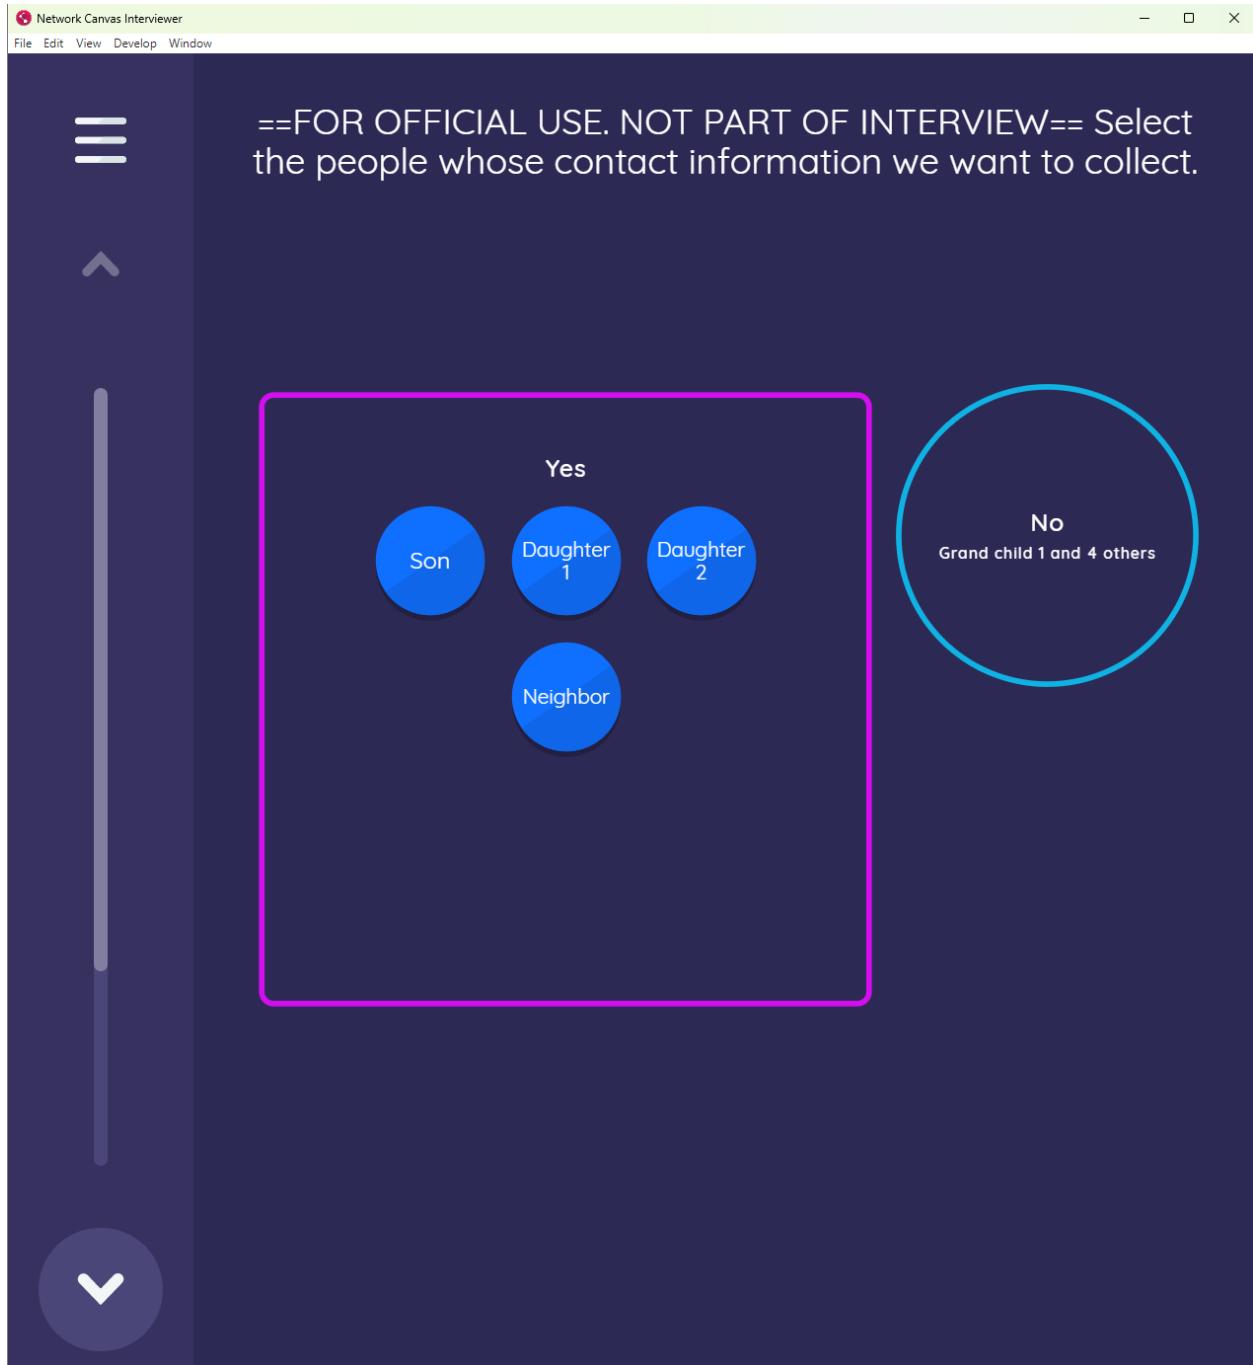

You mentioned that you have someone in your network with whom you sometimes have a challenging relationship. Please provide information about the situation.

Here, Mr. Johnson provides some details about the difficulty he has with his second daughter.

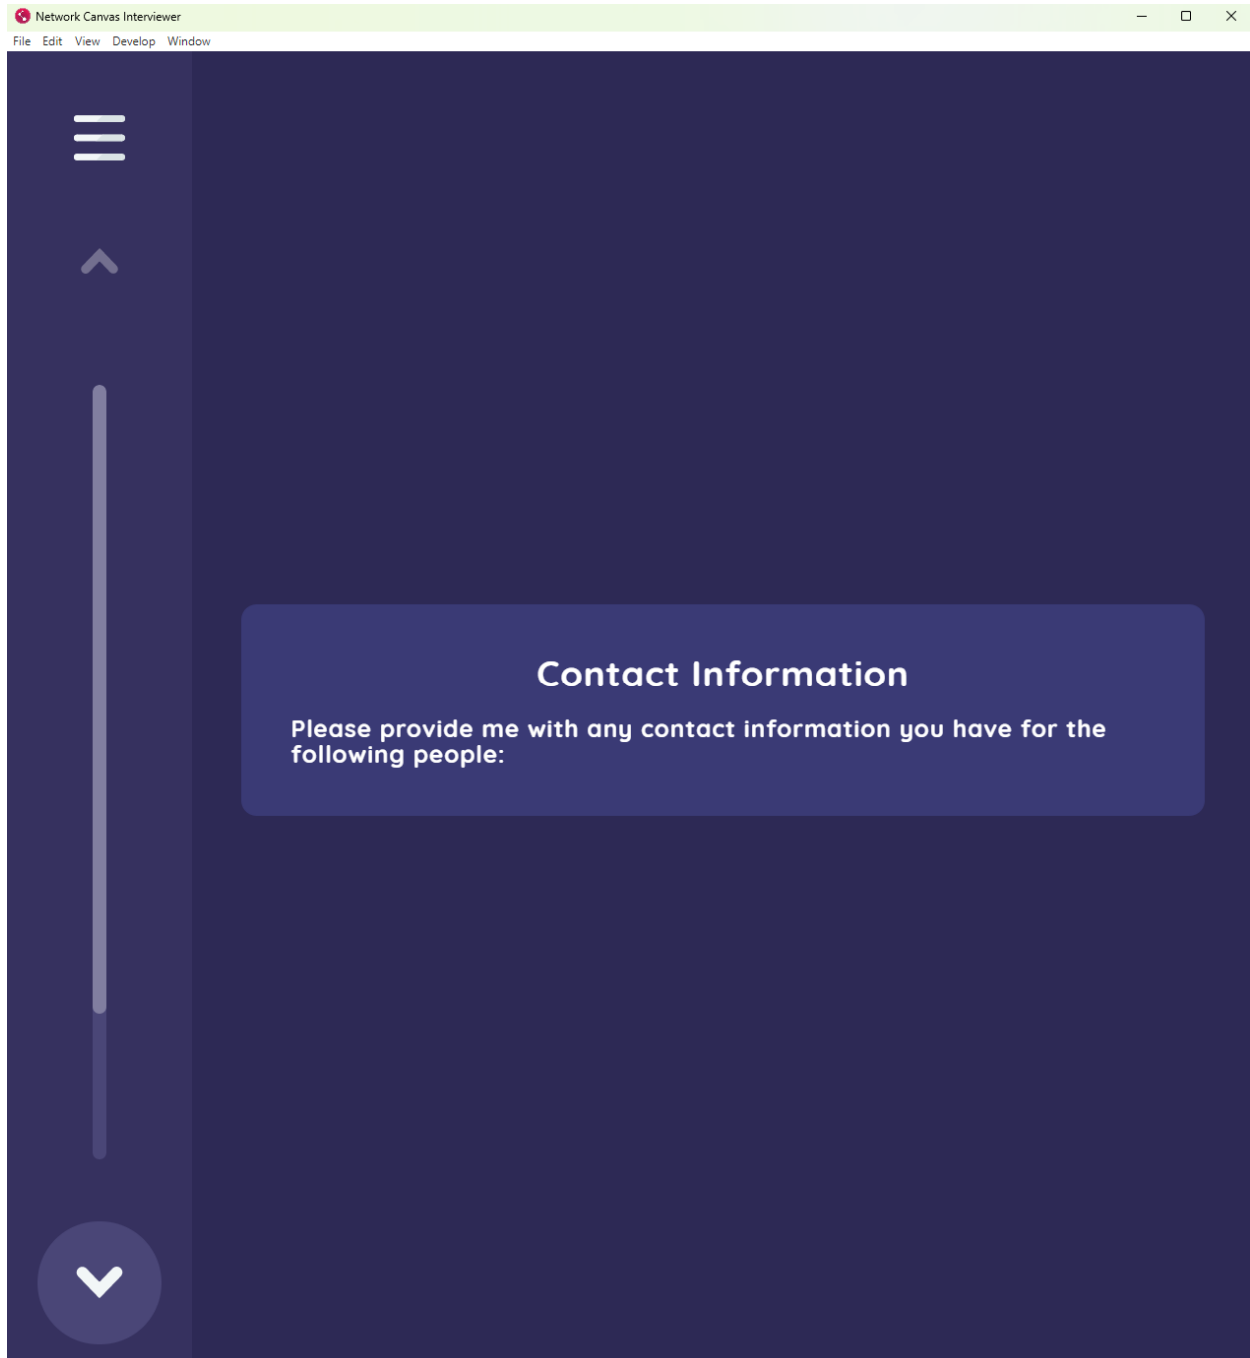

Stage 13. == FOR OFFICIAL USE. NOT PART OF INTERVIEW== Contact Info to Collect

In this interface, the interviewer can quickly sort network members into Yes or No bins to indicate which network members' contact information they would like to get.

Stage 14. Contact Information

The APS worker indicated 4 of the network members in the earlier stage; each has their own separate interface for gathering contact information.

Son

If you needed to get in touch with this person, how would you? Provide any specifics such as telephone number, address, email, etc.

I call him.

###-###-####

If you needed to get in touch with this person, how would you? Provide any specifics such as telephone number, address, email, etc.

###-###-####

If you needed to get in touch with this person, how would you? Provide any specifics such as telephone number, address, email, etc.

###-###-####

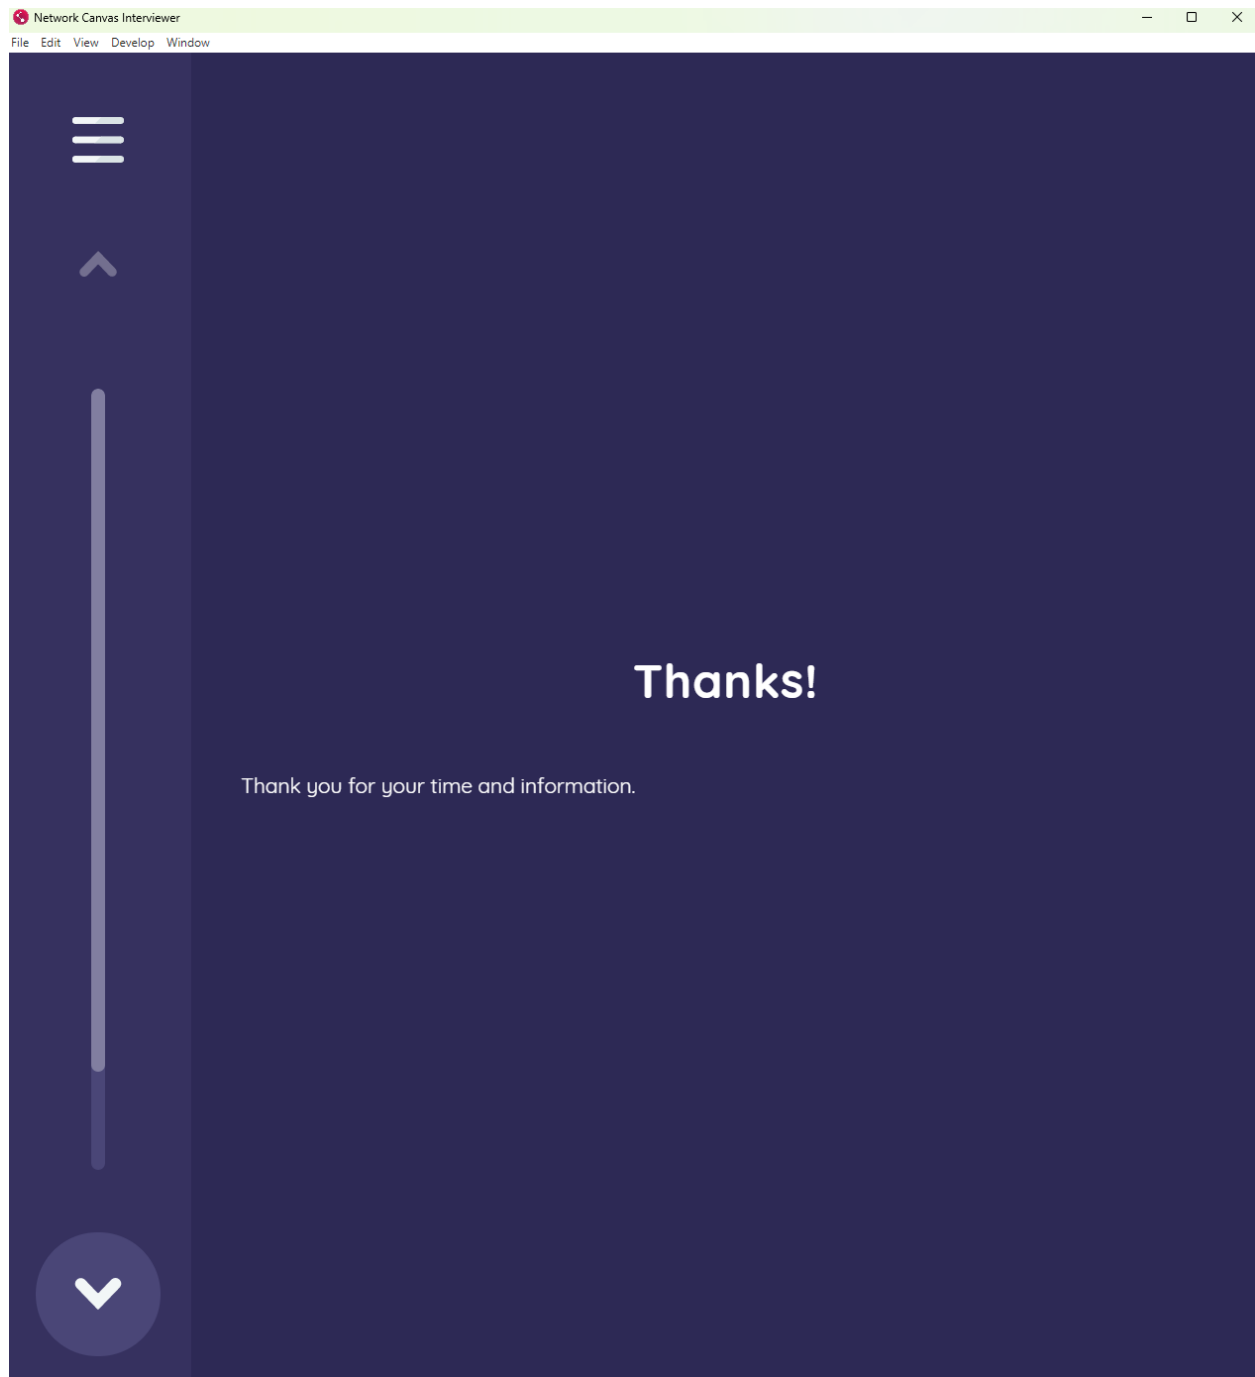

If you needed to get in touch with this person, how would you? Provide any specifics such as telephone number, address, email, etc.

He lives next door (to the right).

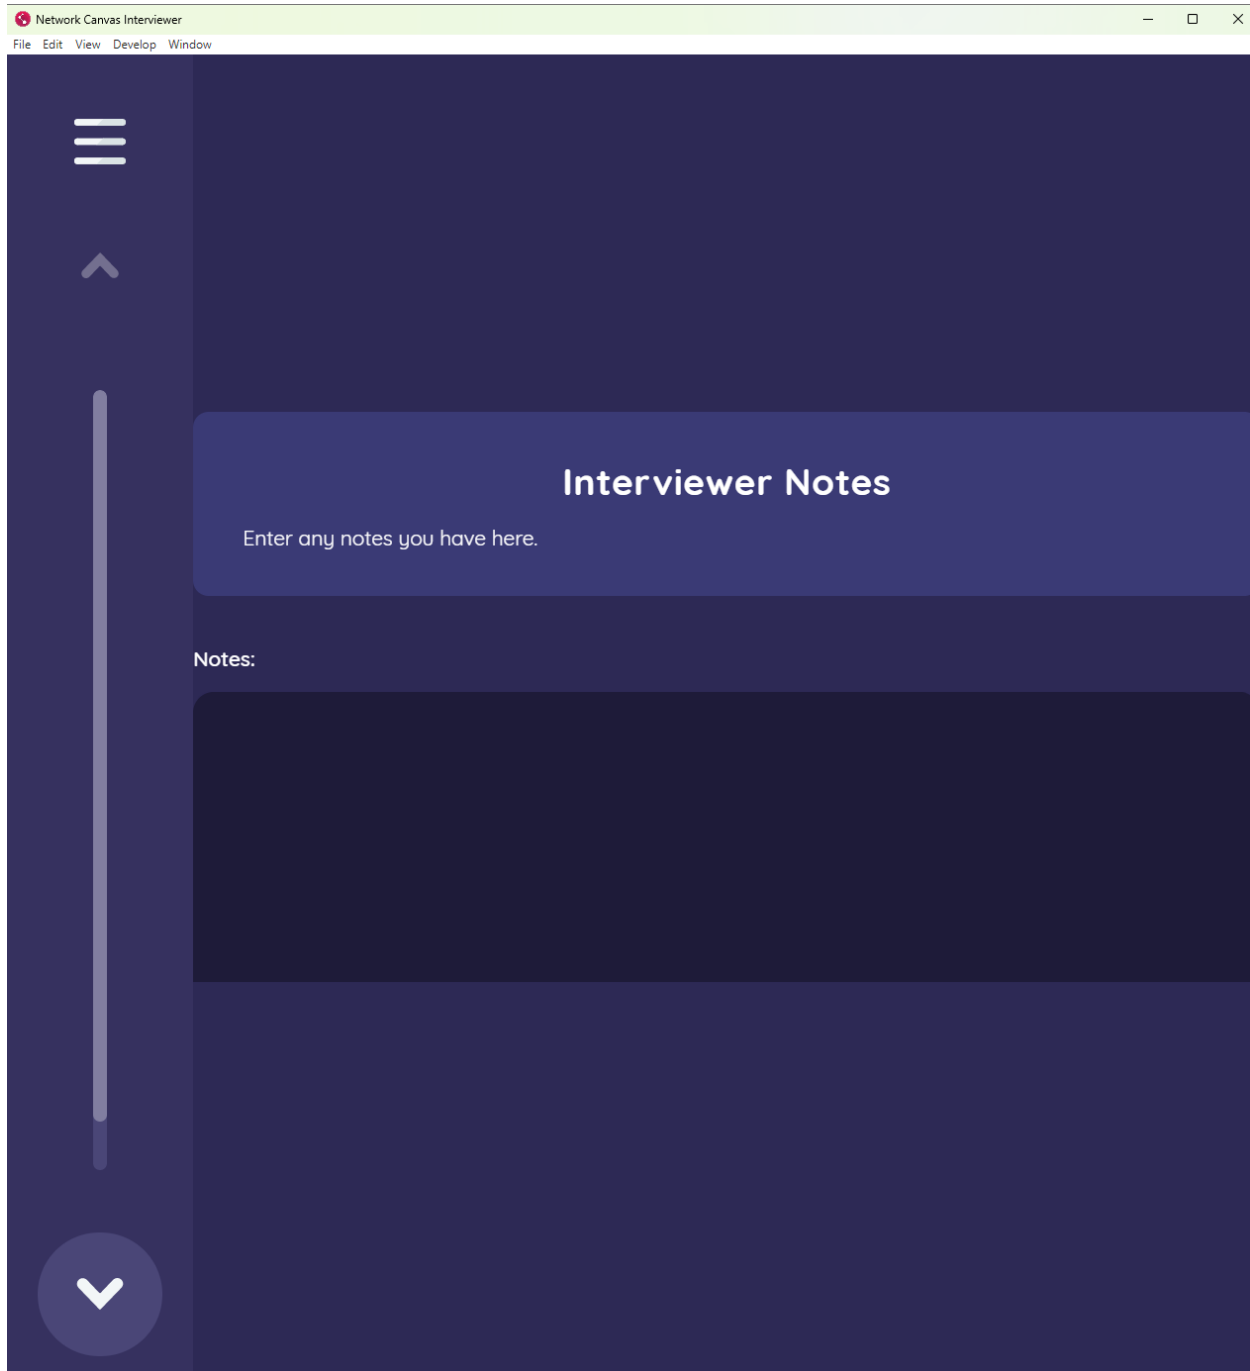

Stage 15. Conclusion

A page with text comes next in the protocol to signal to the interviewer and client that the assessment is completed.

Stage 16. Interviewer Notes

Following the thank you page, the interviewer has an opportunity to add notes to the interview.

The screenshot shows a web application window titled "Network Canvas Interviewer". The interface has a dark blue theme. On the left side, there is a vertical sidebar with a hamburger menu icon at the top, an upward arrow icon, a vertical scrollbar, and a circular button with a downward arrow icon at the bottom. The main content area is divided into two sections. The top section is a dark blue box with the title "Interviewer Notes" in white, followed by the text "Enter any notes you have here." in a lighter blue. The bottom section is a dark blue box with the label "Notes:" in white, followed by a large, empty dark blue rectangular area for text input.

Stage 17. Finish Interview

Once they have completed everything, the interviewer clicks “Finish” on the final stage of the protocol and they are routed to the landing page of Network Canvas, where the recently completed interview is stored and can be accessed for future reference.
